EXECUTIVE SUMMARY

The Solvency and Financial Condition Report presents the business performance, governance, risk profile, and financial and solvency position of QIC Europe Limited (“QEL” or “the Company”) covering the financial year ending 31 December 2023.

This report is prepared in accordance with the supervisory reporting and disclosure requirements under Solvency II, including the Malta Financial Services Authority’s (“MFSA”) Insurance Rules Chapter 8 ‘Financial Statements and Supervisory Reporting Requirements’ and its Annex 1 ‘Guidelines on reporting and public disclosure’.

Section A: Business and Performance

QIC Europe Limited (“QEL”) is a wholly owned subsidiary of Antares Reinsurance Company Limited (“ARE” & previously Qatar Reinsurance Company Limited). The ultimate parent of QEL and ARE is Qatar Insurance Company Q.S.P.C. (“QIC”), which is a leading Qatari publicly-listed insurer with an underwriting footprint across the Middle East, Africa and Asia. QEL is backed by a full guarantee from QIC, rated “A-” by Standard and Poor’s and A.M. Best and benefits from the QIC Group’s capital base.

QEL’s business model is based on writing insurance business through selected Managing General Agents (MGAs) and coinsurance partners across the European Economic Area (“EEA”).

The Company adopted International Financial Reporting Standards (“IFRS”) 17 during 2023 and its financial statements have been produced on that basis. The Company reported a net loss after tax of USD (\$0.7m) in 2023, compared to the net loss (Restated) of USD (\$8.9m) in 2022. QEL’s investment income is driven by investments in fixed income bonds. The net investment income (net of investment management expenses) was USD \$0.9m at the end of 2023, compared to USD \$1.0m in 2022.

The solvency reporting is based on the MFSA returns templates, the content of which has not been changed in respect of the IFRS 17 implementation and, therefore, the related financial information for solvency reporting continues to be based on the previous accounting basis (i.e. IFRS 4).

Gross Written Premium (GWP) of the company decreased by 57%, from USD 250.5m in 2022 to USD \$92.5m in 2023. The decrease is primarily attributable to non-renewal of major contracts following the end of Temporary Permission Regime (TPR) to underwrite UK business. This historic UK business will continue to be run-off from QEL and its branch in the UK.

The company continues to monitor the Covid related developments and manage adequate reserves for future liabilities. This section of the report provides an overview of the Group’s structure, an analysis of the classes of business and geographical spread, and investment performance.

Section B: System of Governance

QEL has established a sound and effective corporate governance framework, which is appropriate to the size, nature, complexity and risk profile of the Company. QEL has adopted a “Three Lines of Defence” model to ensure appropriate segregation of roles and responsibilities across the Company.

The Board retains the ultimate responsibility for the design and effective operation of the system of governance and it has an established Risk and Capital Committee and Audit Committee in addition to a range of other management committees which focus on specific areas. The Board also receives support and advice from various Antares Global committees namely the Finance, Investment, Security, Reserving and Remuneration committees that provide services, advice and recommendations to the Antares Global companies.

The key functions at QEL are the Compliance function, Risk Management function, Actuarial function and Internal Audit function with defined responsibilities, which are documented in QEL policies and procedures. Each of the key functions is independent from the Company's operational functions, thereby ensuring they can undertake their activities in an unbiased and objective manner.

This section of the report provides details on governance roles and responsibilities, internal control framework, operation of the key functions, policies and procedures and the risk management processes including Own Risk and Solvency Assessment (ORSA).

Section C: Risk Profile

QEL targets a multi-class balanced portfolio which is composed of principally low severity/high frequency business. QEL manages the insurance risk through implementation of the underwriting strategy and guidelines, reinsurance arrangements, exposure management and appropriate reserving and claims management processes.

The total SCR has fallen by \$4.4m compared to last year. However, the percentage risk ranking by risk category has remained relatively stable. The most material risk categories based on their capital impact are counterparty default risk and non-life underwriting risk.

Counterparty credit risk is the largest contributor to capital requirements. At the end of the reporting period, the Company's largest exposure to credit risk came from the underwriting risk ceded to reinsurance counterparties. Most of this cession is intra-Group: currently it is mainly driven by business ceded to Antares Re; for the reserves, the historical cessions to QIC are also meaningful. QIC is rated A- by S&P Global Ratings and A- by A.M. Best. Antares Re benefits from the same ratings.

The Company has detailed policies and procedures on the management of all risk categories and the risk appetite and tolerance statements, approved by the Board, govern the concentration limits in relation to counterparties, credit quality and peril-regions to avoid material risk concentration.

This section of the report provides details of the QEL risk profile, risk management and mitigation processes for different risk categories and their consideration in the capital calculation.

Section D: Valuation for Solvency Purpose

The assessment of the available and required regulatory capital is made by taking an economic view of the Company's assets and liabilities, in accordance with the Solvency II ("SII") valuation principles.

On an International Financial Reporting Standards ("IFRS") basis the asset base supporting the business decreased to USD \$519.8m in 2023 from \$523.0m in 2022. Under the previous accounting basis, total assets stood at \$809.7m (2022: \$951.3m) with the reductions in premiums being the main driver.

On a Solvency II ("SII") basis the asset base has reduced from \$642.6m in 2022 to \$614.5m in 2023. The main difference on a SII basis relates to Deferred Acquisition Costs, which are valued at nil in the SII balance sheet as the company does not expect future cash flows to arise from this asset.

On a net basis, the Solvency II Technical Provision have increased in 2023 by \$7.7m, when compared to 2022. The gross technical provisions increased by 3.5% whilst the reinsurance recoverables increased by 3% between 2022 and 2023. The similarity in reduction proportions reflect the consistent structure of reinsurance over the years. The Risk Margin also reduced between 2023 and 2022 reflecting a reduced risk profile.

This section of the report provides the valuation of the assets and liabilities and a quantitative and qualitative assessment of the differences in the IFRS, the previous accounting basis and SII basis.

Section E: Capital Management

The Solvency Capital Requirement ("SCR") is calculated using the SII standard formula. The SCR as at 31 December 2023 is \$38m (2022: USD \$42.4m).

QEL – Eligible Capital to cover SCR USD'000	2023 YE	2022 YE	Difference
Eligible Capital for SCR	64,663	69,530	(4,867)
Solvency Capital Requirement (SCR)	38,063	42,425	(4,362)
SCR Ratio	170%	164%	6%

*All numbers relate to the assessed Year End position

The Board has an approved risk appetite of maintaining 140–160% solvency coverage ratio and the solvency ratio stood at 170% as at 31 December 2023 compared to 164% at 31 December 2022. This represents a 6% increase in the Solvency Capital Requirement coverage.

This section of the report provides structure of the basic own funds, tiers of the eligible own funds and the solvency capital calculation.

Section F: Subsequent events

No events have been identified subsequent to balance sheet date which require new estimates or changes to existing accounting estimates.

Directorship changes

Marios Georgiou formally resigned from the Board of QEL at the meeting of the 13th March 2024.

A BUSINESS AND PERFORMANCE

A.1 Business

A.1.1 The Company

QIC Europe Limited ('the Company') is a limited liability company registered in Malta. QIC Europe Limited (QEL) is a wholly owned subsidiary of Antares Reinsurance Company Limited (Antares Re, previously Qatar Reinsurance Company Limited), a Class 4 Bermuda-based (re)insurer. Antares Re is a wholly-owned subsidiary of QIC Capital LLC, which in turn is a wholly-owned subsidiary of Qatar Insurance Company Q.S.P.C., the ultimate parent of the QIC Group of companies and a leading Qatari publicly-listed insurer with an underwriting footprint across the Middle East, Africa and Asia. QEL is backed by a full guarantee from QIC Group, rated 'A-/Strong' by Standard and Poor's and 'A-/Excellent' by A.M. Best and benefits from the QIC Group's capital base.

Established in 2014, QEL is a Malta domiciled insurer with a branch in the UK authorised to underwrite all non-life classes of insurance and reinsurance throughout the European Economic Area ("EEA") and UK. QEL's business model is based on writing insurance business through selected Managing General Agents (MGAs) and coinsurance partners across the EEA and UK. QEL's Italy Branch was closed on the 13th January 2022.

QEL is authorised and regulated by the Malta Financial Services Authority.

Supervisory Authority

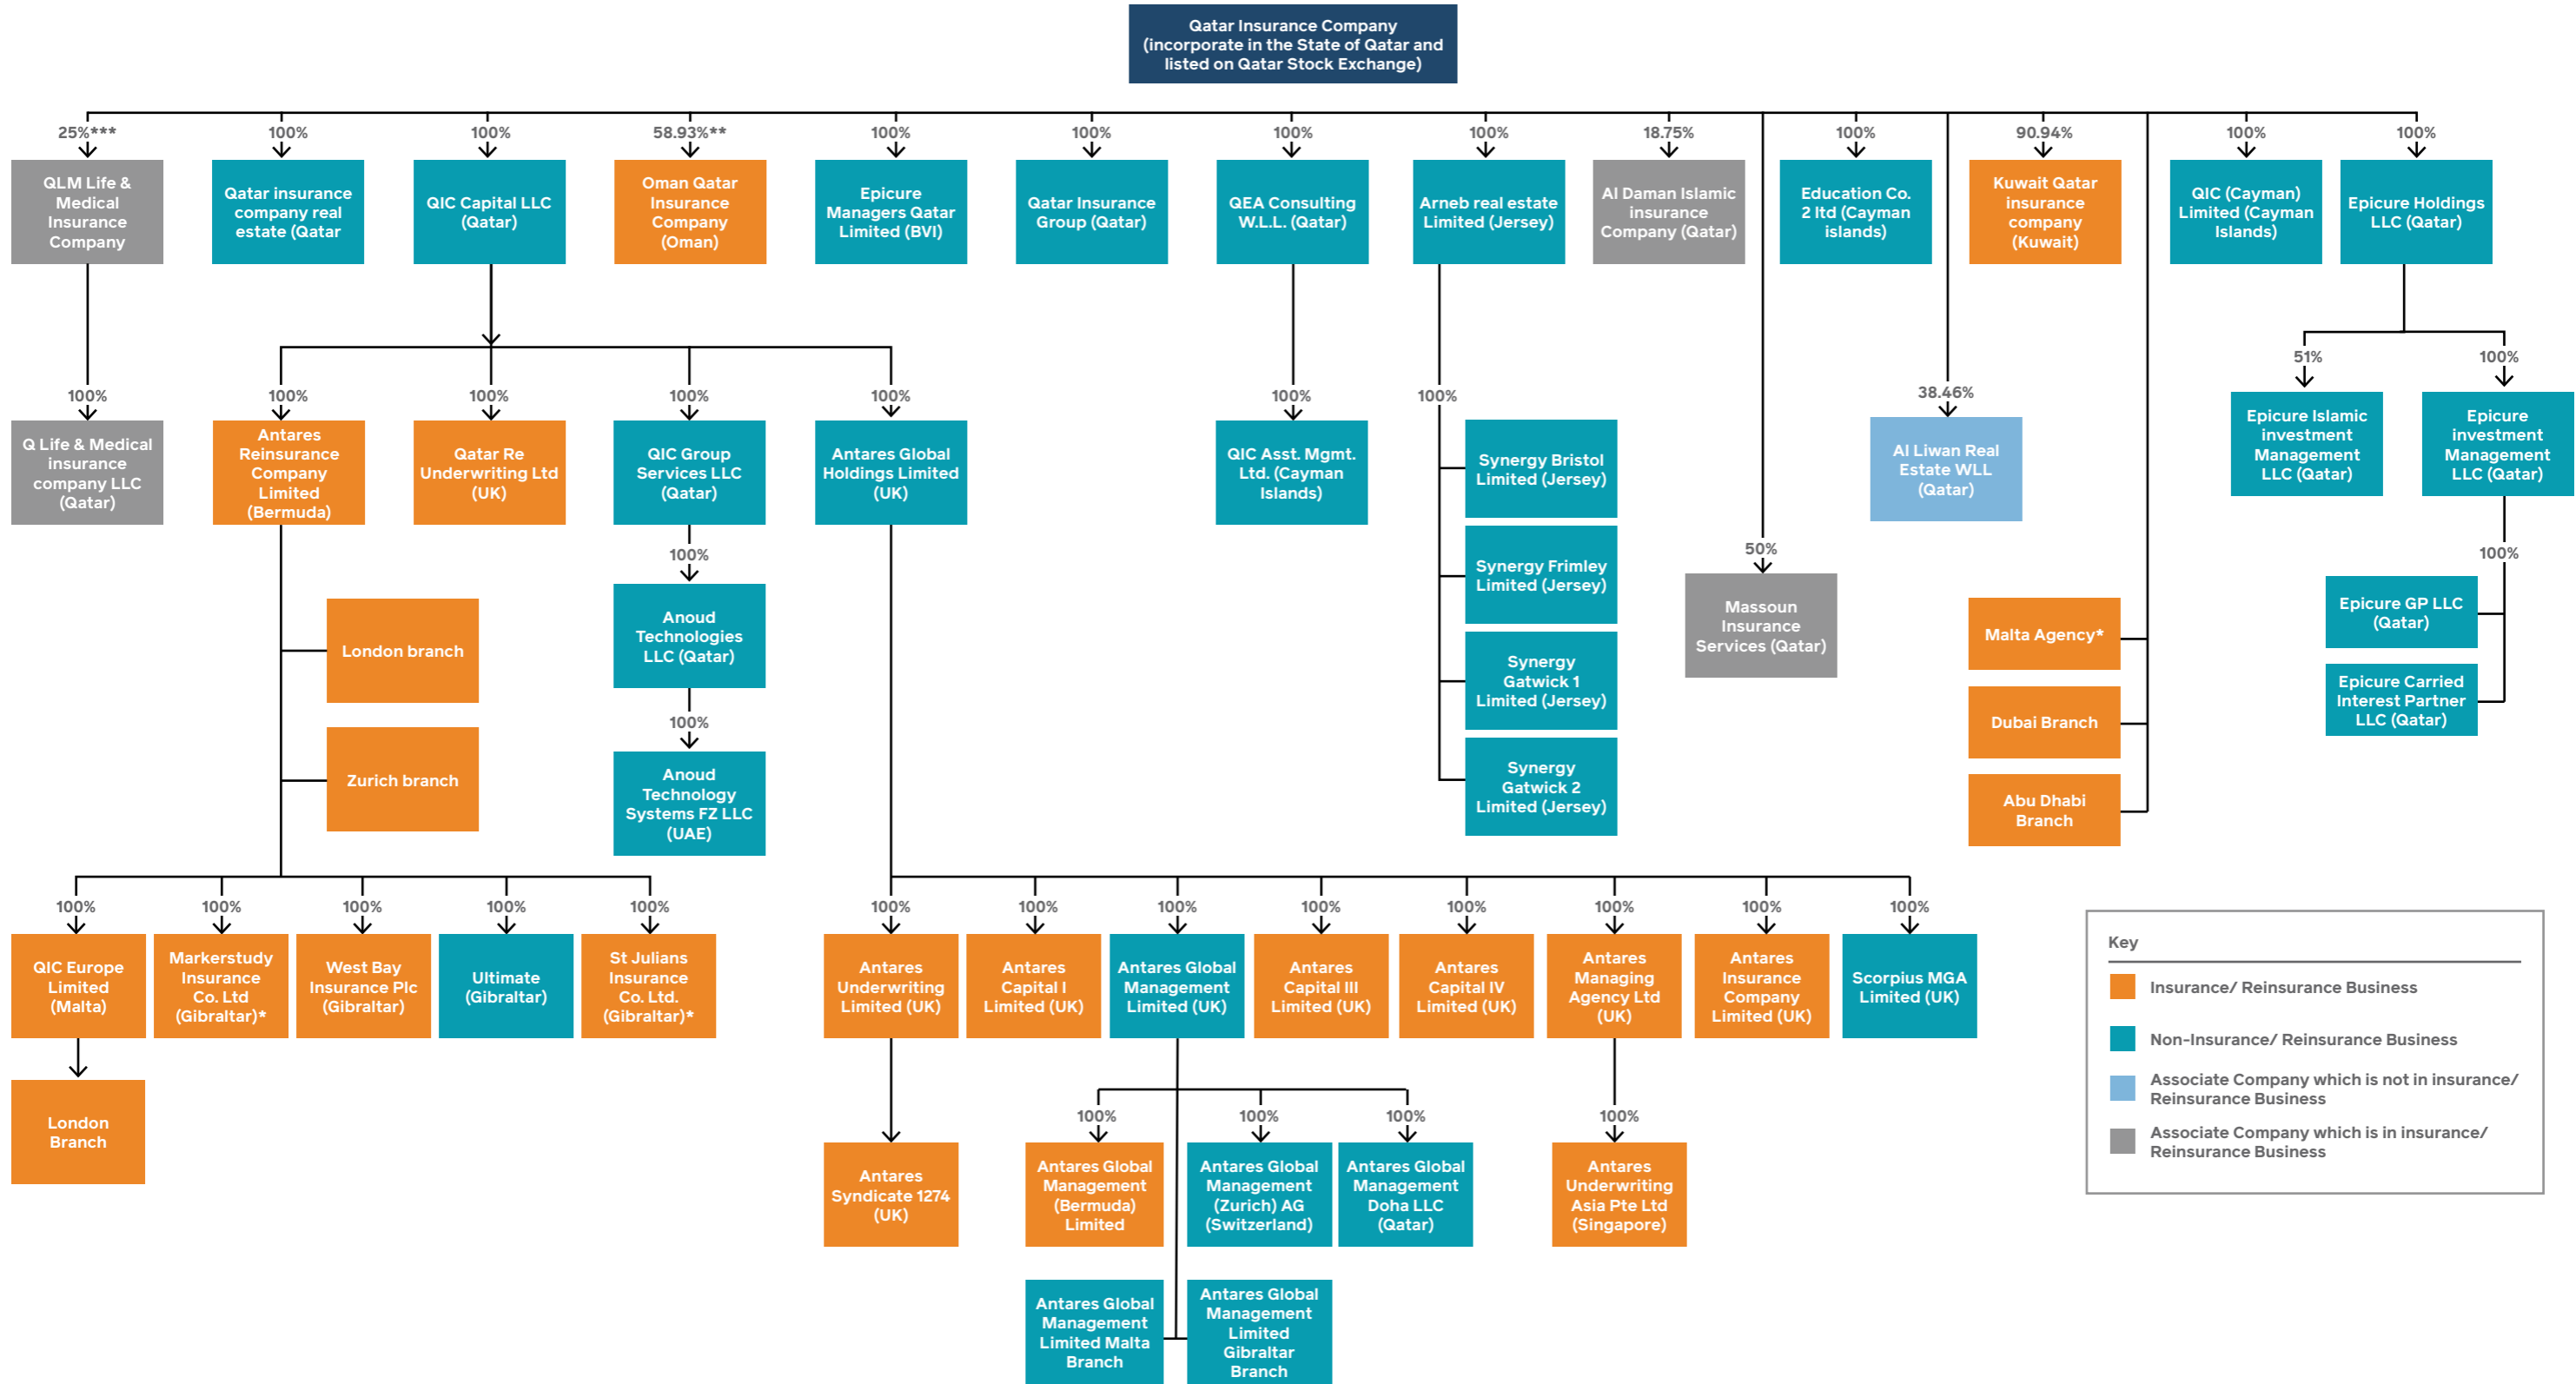

Malta Financial Services Authority
Triq I-Imdina, Zone 1, Central Business District,
Birkirkara, CBD 1010, Malta

External Auditor:

KPMG Malta
Portico Building, Marina Street, Pieta 2563 1000

A.1.2 Ownership Structure

The QIC Group legal structure is presented below. Antares Re owns 22,500,000 ordinary shares that have a nominal value of USD 1.00 in QEL.

* In run-off/liquidation

** OQIC is listed on Muscat Securities Market. QIC's direct ownership is 55.98%, remaining shares are held through group entities

*** QLM is listed on Qatar Stock Exchange

A.1.3 Insurance and Reinsurance Business written

QIC Europe Limited holds licences to write the following classes of general business insurance and reinsurance business:

- Class 1 – Accident
- Class 2 – Sickness
- Class 3 – Land vehicles
- Class 4 – Railway rolling stock
- Class 5 – Aircraft
- Class 6 – Ships
- Class 7 – Goods in transit
- Class 8 – Fire and natural forces
- Class 9 – Other damage to property
- Class 10 – Motor vehicle liability (in some countries)
- Class 11 – Aircraft liability
- Class 12 – Liability for ships
- Class 13 – General liability
- Class 14 – Credit
- Class 15 – Suretyship
- Class 16 – Miscellaneous financial loss
- Class 17 – Legal expenses
- Class 18 – Assistance

A.2 Underwriting Performance

Premiums written by the Company in 2023 were USD \$92.5m (2022: USD \$250.5m), representing a 63% decrease on prior year. The decrease is primarily attributable to non-renewal/cancellation of major contracts which is a result of re-underwriting exercise undertaken on the existing book of business during 2023.

The underwriting result remains the Company's focus, particularly, on the underwriting risk selection and targeted premium rating increases to improve the performance of the underlying portfolio.

The underwriting results (under the previous accounting basis) for 2023 compared with 2022 by line of business and geography are as follows;

2023									
USD'000	Workers' compensation insurance	Motor vehicle liability insurance	Other motor insurance	Marine, aviation and transport insurance	Fire and other damage to property insurance	General liability insurance	Credit and suretyship insurance	Miscellaneous financial loss	Total
Gross written premiums	(1)	32,057	6,808	(977)	44,665	6,405	3,573	-	92,519

Net claims incurred	1	41	-	87	1,893	385	23	59	11,051	11	72	13,600
Net change in other technical provisions	-	-	-	-	-	-	-	-	-	-	-	-
Expenses incurred	-	(2)	-	(18)	(46)	(50)	(1)	(2)	(7,632)	(4)	3	(7,707)
Other expenses	-	-	-	-	-	-	-	-	-	-	-	-
Underwriting result	(0.2)	25	(3)	13	912	739	44	140	5,870	105	(140)	7,685

A.3 Investment Performance

QEL's investment strategy is tailored to meet the Company's business needs and objectives. The asset mix is closely managed to meet liquidity needs and investment return targets. QEL's investment income is driven by investments in fixed income bonds.

Income Allocation	YE 31/12/2023	YE 31/12/2022
Net Interest Income	1,144	1,293
-on Fixed Income	1,151	1,314
-Finance charges	(7)	(21)
Realized Gain / (Loss)	(198)	(114)
Unrealized Gain / (Loss)		
Gross Investment Income	946	1,179
Less: Advisory Fee	(80)	(167)
Net Investment Income	866	1,012

The investment income has remained consistent in line with a consistent investment strategy and asset base.

A.5 Other Material Income and Expense

The main expenses under the previous accounting basis beyond underwriting and investment relate to employee compensation:

	2023 Expense	2022 Expense
	(\$m)	(\$m)
Employee Related Costs	6.4	6.8
Professional Fees	2.7	1.8
Other Administrative Costs	1.9	7.0
Total	11.0	15.6

A.6 Any other material information

There is no other material information regarding the business and performance.

B SYSTEM OF GOVERNANCE

B.1 Introduction

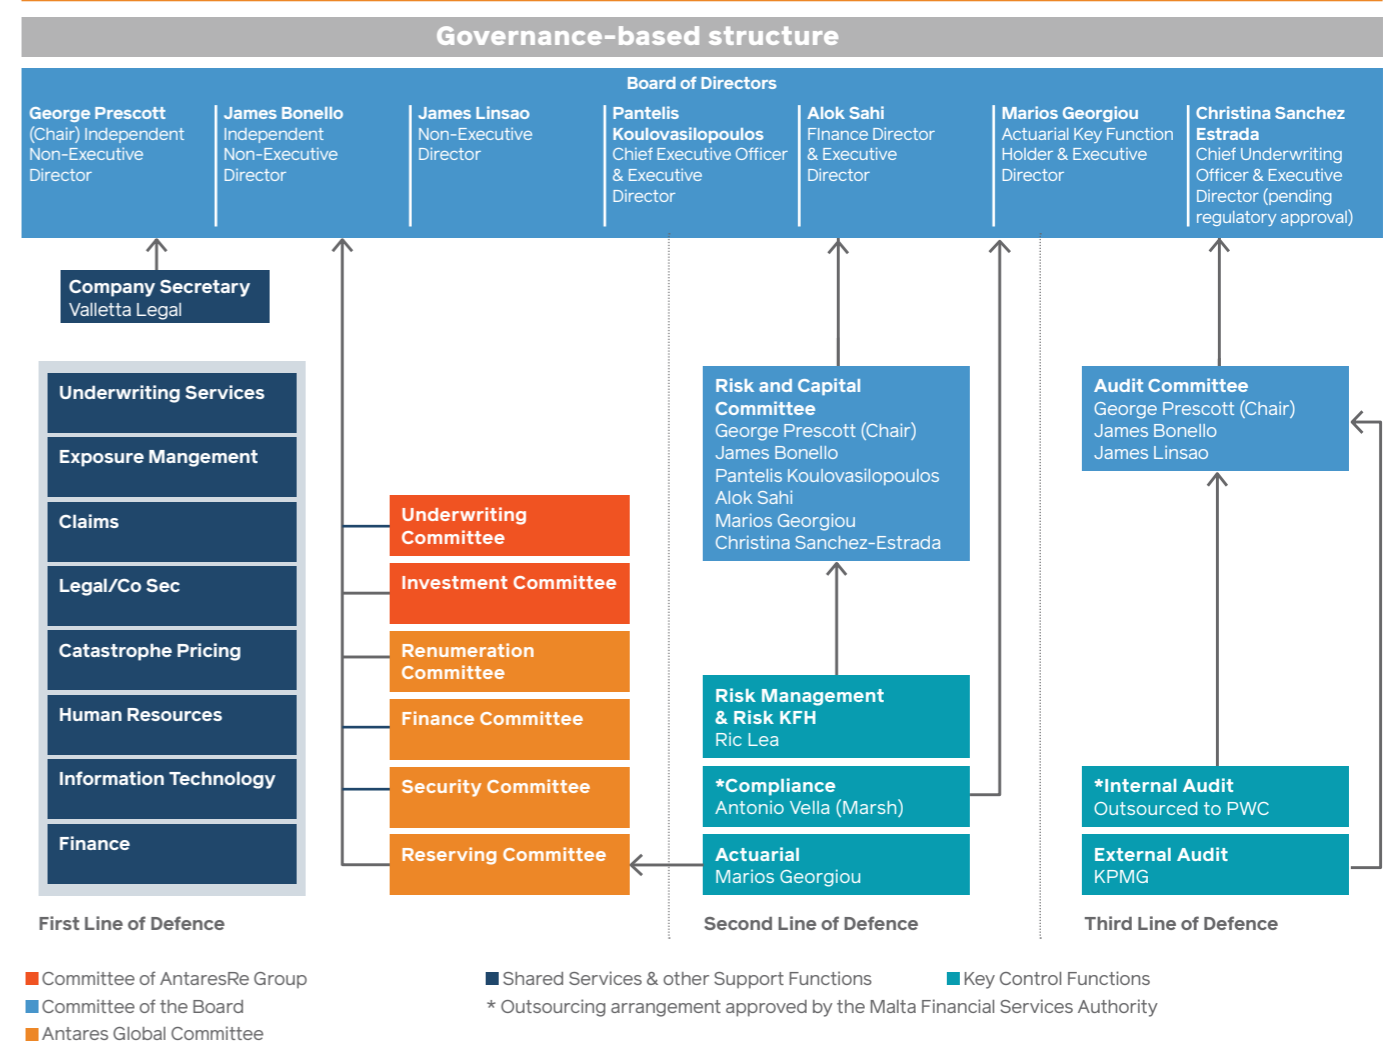

QEL has established a sound and effective corporate governance framework, which is appropriate to the size, nature, complexity and risk profile of the Company. This enables sound and prudent management of the Company's activities so that the interests of policyholders and other stakeholders are appropriately protected.

The governance framework is administered by the Board and its Committees to provide robust oversight and clear accountability with specific focus on the delegated underwriting and claims management arrangements.

QEL has adopted a "Three Lines of Defence" model to ensure appropriate segregation of roles and responsibilities across the Company. The segregation of responsibilities applies across all business functions and various layers of review exist within each business function and between committees and the Board. These controls are audited on a regular basis by the Company's internal and external auditors.

The current governance structure for QEL at the time of writing this report is presented below.

The key functions have defined responsibilities, which are documented in various policies and procedures. The Board and committees have approved terms of reference.

B.1.1 Responsibilities of the Board and Committees

The Board meets at least quarterly and, ad-hoc, when required, and carries out its duties within established terms of reference.

The Board has appointed a Risk and Capital Committee, an Underwriting Committee and an Audit Committee to assist in the effective discharge of its duties, although the Board retains ultimate responsibility.

A brief description of the responsibilities of the Board Committees are provided in the table below.

Board Committee	Responsibilities
Board of Directors	<ul style="list-style-type: none"> Oversee the risk management system, including setting the Company's risk appetite and tolerances. Set and oversee the effectiveness of the Company's Governance Structure and Internal Control System as detailed within this policy. Set and oversee adherence to corporate policies. Ensure QEL meets minimum regulatory requirements. Have on-going regard as to whether any outsourced functions to third parties or affiliates: <ul style="list-style-type: none"> adversely affect QEL's governance and risk management structures; have an increased operational risk; affect the MFSA's ability to effectively supervise QEL; and be detrimental to policyholder interests
Risk and Capital Committee (RCC)	<ul style="list-style-type: none"> Review and approve for recommendation to the Board the Risk Management Policy and ORSA Policy. Ensure the enterprise risk management system remains adequate and effective given the Company's risk profile. Identify current and future potential risk exposures and monitor actual exposures against risk appetite and tolerances, including emerging risks. Ensure maintenance of sufficient economic and regulatory capital. Promote a risk aware culture and encourage risk-based decision making.
Audit Committee (AC)	<ul style="list-style-type: none"> Review and approve for recommendation to the Board the Company's annual and interim financial statements. Review all significant changes concerning the principles and practice of auditing and accounting used by the external auditor or the Company's Finance department in preparing financial statements. Review any internal audit or financial reports issued to management and any associated responses provided by management. Annually review and report on the quality and effectiveness of the audit process, including assessing the external auditor's independence. Evaluate the effectiveness of the Internal Audit function, including its purpose, activities, scope, adequacy and costs, and approve the three-year Internal Audit Plan and any subsequent material changes. Provide assurance as to the integrity of: <ul style="list-style-type: none"> Risk Management and Internal Control System Compliance function Internal Audit Function

Board Committee	Responsibilities
Underwriting Committee (UC)	<ul style="list-style-type: none"> Review and approve periodically QEL's underwriting guidelines and policies, including entering into any major line of insurance or reinsurance; Review QEL's underwriting performance both in the aggregate as well as in each major business segment or class of business; Advise the Risk Management Department and the RCC of any changes in the risk profile or relevant external events that could impact QEL's Standard Formula validation; Review QEL's losses in the aggregate and by line of business in such manner and format as requested by the Board; Review and recommend reinsurance programmes, practices and security; Advise the Audit Committee in such matters as may be required; Review and recommend the annual business plan for QEL's underwriting activities; Monitor monthly reports from regarding the payment performance of material coverholders; Undertake any other activities with respect to QEL's underwriting function consistent with these terms of reference; Ensure an independent underwriting review of each MGA is conducted on an annual basis (the general methodology to be discussed and agreed with the CUO); Provide Product oversight and monitoring of Conduct Risk issues in accordance with the Conduct Risk Policy; Conduct Product Risk assessments covering all classes of business at least annually in accordance with the Conduct Risk Policy; Monitoring and general oversight of Conduct / Product Risk assessments undertaken by the Product Oversight Group (POG) and providing further challenge. Approval/rejection of all High Conduct Risk business within QEL. Monitor Conduct Risk management reporting and escalate matters, as appropriate, to the QEL Board. Review reports received from the DA Group on the creditworthiness of potential new MGAs. Review reports received from the DA Group on the recommendations of MGA audits and their current status. Monitor monthly report outlining the DA Group's activity.

The Board also receives support and advice from the following Antares Global committees that provide services, advice and recommendations to the QIC Global companies, including:

- Reserving Committee;
- Remuneration Committee;
- Security Committee;
- Finance Committee;
- Investment Committee

This support is part of the successful initiative of integrating services through the intra-group Outsourcing Agreement to Antares Global Management Limited (previously QIC Global Services Limited) and by detailing the Service Level Agreement ("SLA") in respect of all functions, which is monitored by the Board and its Committees.

Additionally, the Antares Re Group also has in place a Group Underwriting Committee.

QEL is also supported by a Product Oversight Group (POG), which was set up for the governance and oversight of insurance products which it manufactures – or co-manufactures – and distributes, including where it outsources the manufacture and/ or distribution of insurance products.

B.1.2 Material Changes in the System of Governance

The material changes in the system of governance are noted as follows:

Some further changes were made in 2023:

- Approval of Cristina Sanchez-Estrada as CUO of QIC Europe Limited and Executive Director, Member of the RCC and Director responsible for overseeing distribution activities.
- Proposed appointment of Nilesh Tank as Executive Director, Risk Manager and Member of the RCC (this application was withdrawn owing to a resignation).

Cristina Sanchez-Estrada was appointed as the registered representative for QIC Europe Limited with the Malta Insurance Association and Motor Section representative.

Charlie Hopkins was appointed as the registered representative for QIC Europe Limited with the Motor Insurers' Bureau and Malta Green Card Bureau.

B.1.3 Remuneration Policy

Antares Global's remuneration policy sets out the principles and practice for the development, implementation and application of the employee remuneration framework for QIC Capital and all its subsidiaries referred to as Antares Global Companies, including QEL.

Antares Global's remuneration philosophy is to have a remuneration framework that supports the business strategy, the risk management strategy and the long-term interests and performance of Antares Global. In particular, the philosophy is to provide total compensation that is in line with market rate and structured and calibrated so as to attract, retain, motivate and reward its employees to deliver enhanced performance in the eyes of customers and shareholders. The remuneration framework based upon this philosophy is an integral part of the offering to employees.

The remuneration framework is underpinned by a set of guiding principles:

- The remuneration framework should provide employees with total compensation that is competitive within Insurance Market.
- The remuneration framework should promote a high-performance culture by differentiating total compensation based on the performance of the business and the performance of individuals.

- The remuneration framework should take into account the respective tasks and performance of the executives, senior management, holders of key functions and other categories of employees whose professional activities have a material impact on QEL risk profile and/or results.
- Variable compensation awards should be linked to relevant performance metrics, which can include the performance of Antares Global, specific business areas, and individual achievements.
- Expected individual performance should be clearly defined through a structured system of performance management, and performance against expectations should be factored into compensation decisions.
- The remuneration framework should promote sound and prudent management and not encourage risk-taking that exceeds the risk tolerance limits of the business.
- The remuneration framework should incorporate measures aimed at avoiding conflicts of interest.

QEL provides some employees with a pension, however the Company does not operate any early retirement schemes or defined benefit pension schemes.

Details on Board and employee remuneration over the reporting period can be found in section 2.5 Other Material Income and Expense.

B.1.4 Material transactions with shareholders, persons who exercise a significant influence on the undertaking, and with members of the administrative, management or supervisory body

Directors

The independent non-executive directors received remuneration from the Company for their services. There are no other material transactions to note with Director's or other controllers.

Shareholders

Antares Reinsurance Company Limited (ARe): is immediate parent of the entity. ARe also provides a whole account variable quota share to the Company covering entire spectrum of classes of insurance written out of Malta.

No additional capital contribution was made in the Company from ARe during 2023.

Antares Global Management Limited (formerly QIC Global Services Limited): undertakes operational activities as part of a services agreement with the Company. These services are on cost plus margin basis.

Investment Management: Epicure Investment Management LLC, a wholly owned subsidiary of Qatar Insurance Company, manages the Company's invested assets. The management fee is governed by the investment mandate and ranges between 0.10% to 0.50% of the invested asset type.

B.2 Fit and Proper requirements

The Company ensures that the Board members and key function holders are fit and proper to discharge their responsibilities in accordance with the following definitions:

- An assessment of whether an individual is 'fit' involves an evaluation of the person's professional qualifications, knowledge and experience to ensure they are appropriate to their role. It also demonstrates whether the person has exercised due skill, care, diligence, integrity and compliance with relevant standards that apply to the area or sector in which the individual has worked.
- An assessment of whether a person is 'proper' includes an evaluation of a person's honesty, reputation and financial soundness. This includes, if relevant, criminal convictions or disciplinary offences.

The Fit and Proper Policy applies to the following positions of responsibility:

- Board and committee members;
- Key Function Holders – Compliance, Risk Management, Actuarial and Internal Audit;
- Officers and managers of the company;
- Third-party service providers, including insurance managers, auditors, actuaries and country representatives; and
- Any other approved roles (as required by the local regulator)

The following procedures are followed in assessing the Fit and Proper requirements:

- Ensure that a PQ (Personal Questionnaire) and the relevant forms are filed with the regulator.
- The directors are requested to report any changes in their status in relation to Fit and Proper requirements or any potential conflict of interest.
- An internal questionnaire is completed by all roles within the company and reassessed on at least an annual basis.

When assessing the fitness of the Board of Directors, the Company ensures that collectively the Board possesses the appropriate qualifications, experience and knowledge in the following areas:

- Insurance and financial markets knowledge;
- Business strategy and business model knowledge;
- System of governance knowledge;
- Financial and actuarial analysis knowledge and;
- Regulatory framework and requirements knowledge.

B.3 Risk Management System including Own Risk and Solvency Assessment

B.3.1 Risk Management Function

- Develop, implement and maintain the Risk Management Framework and associated Risk Management policies.
- Assist the Board in developing the Risk Appetite Statements, facilitate the ongoing monitoring of the risk appetite and tolerances and escalate any breaches to the CEO, committees and the Board.
- Coordinate the ORSA processes and prepare the ORSA report.
- Support the business functions in identifying, assessing and managing their risks. Facilitate the identification, documentation and assessment of the key controls. Communicate regularly with the business functions to understand, challenge and monitor their risks and controls.
- Investigate reported incidents of control failings or weaknesses, and document them.
- Update and maintain the Risk Register.
- Identify, document and assess the impact of emerging risks.
- Facilitate the stress, scenario and reverse stress testing.
- Provide advice, consultation and training to business functions on risk and control-related matters.
- Coordinate assurance activities with the Actuarial, Compliance and Internal Audit functions.
- Provide quarterly risk reports to the Risk and Compliance Committee and the Board.
- Liaise with external parties, including regulators, as appropriate.

B.3.2 Compliance Function

The Compliance function of QEL is performed by Marsh Management Services Malta Limited ("Marsh"), in their role as Insurance Managers, and Antares Global Management Limited ("Antares Global"), under an outsourced arrangement, and is comprised of: the Compliance Officer (an employee of Marsh) (ii) A central compliance team based in UK ("Antares Global").

The Compliance function is responsible for directing and overseeing the management and monitoring of the Company's adherence to applicable regulatory and legislative requirements, and to the Company's internal policies, procedures and controls to ensure the effective mitigation of compliance risk. The Compliance function also acts in an advisory capacity to the Board and wider Company regarding the impact of a range of regulatory and legislative requirements.

The Compliance function fulfils its obligations by carrying out the following key activities:

- Act in an advisory, oversight and assurance capacity to ensure that the Company has the necessary systems and controls to enable it to adhere, on an ongoing basis, to regulatory and legislative requirements.
- Develop and monitor the Company-wide compliance policies and procedures, as well as undertake regular and ad-hoc compliance activities.
- Develop an annual compliance plan setting out the key objectives and activities of the Compliance function in the year ahead and ensure adequate resources are in place.
- Provide guidance and support on regulatory and legislative requirements. Ensure that staff receive adequate training on various compliance matters.
- Ensure that business is written in accordance with applicable licensing requirements in those jurisdictions in which the Company writes business.
- Liaise with the regulator(s) to develop and maintain open and cooperative relationships and ensure that appropriate disclosures are made to the regulator(s) of anything relating to QEL that the regulator(s) would reasonably expect notice of. Ensure that all regulatory returns are submitted to the regulator(s) within the prescribed timescales.
- Promote and embed a strong compliance culture throughout the Company.

B.3.3 Risk Management System

The Risk Management Framework defines the process of identification, assessment and reporting on the material risks and the mitigating controls. The process is documented in the Risk Management policy.

QEL's overall risk strategy is designed to ensure:

- Alignment of the Risk Management System with the business objectives;
- Clear ownership and accountability for risk management;
- Complete coverage of all material risks;
- Risk and control assessment, implementation of actions to reduce risks to acceptable level;
- Risk and control monitoring and reporting, including escalation of material issues to committees and the Board;
- Link to the capital assessment to demonstrate that the company is adequately capitalised for the risks assumed
- Compliance with all relevant regulatory requirements; and
- Risk Management outputs inform the ORSA process.

The Risk Management Framework comprises a set of key policies and procedures and is implemented and integrated through the various committees, processes and procedures. These processes contribute towards QEL's solvency self-assessment, and identify and measure all material risks to which the Company is exposed, informing the decision-making process.

Risk governance is a major component of the overall risk framework and provides for clear roles and responsibilities in the oversight and management of risks. It also provides a framework for the reporting and escalation of risk and control issues across the Company.

QEL's governance framework is built using a 'three lines of defence' model. The current governance structure at the time of writing this report is presented in section B.1.

The key functions have defined responsibilities, which are documented in various policies and procedures. The Board and Committees have approved terms of reference.

The key responsibilities of the Board, committees and functions are summarised in sections B.1.1 and B.3.1.

This section provides an overview of key aspects in the overall risk management framework.

Risk Appetite & Risk Tolerance

QEL has defined a set of Risk Appetite and Risk Tolerance statements that lay down the parameters within which the Company will manage risk. These statements are reviewed at least annually, and, if necessary, updated.

The Risk Appetite is monitored on an ongoing basis. Quarterly monitoring reports are prepared by the Risk Management function and provided to the committees and the Board.

Risk Register

The Risk Register summarises the overall risk profile of QEL. The business functions are responsible for identifying material risks associated with their activity. The risk identification and assessment process are facilitated by the Risk Management function.

Risk owners are required to assess the inherent and residual risk position using standardised assessment ratings. As part of the control self-assessment, the control owners have the responsibility to assess the design and performance of the risk register controls. The material risks and key controls are discussed with the business functions quarterly and documented in the Risk Register by the Risk Management function, which challenges the risks and controls ratings.

Output from the Risk Register and key changes to the risk profile are reported to the RCC with escalation to the Board as appropriate.

Exposure management

Exposure management at QEL is supported by the Antares Global Exposure Management team. Their responsibilities include producing exposure management reports, recommendations or remedial actions (as applicable) and contribution to the ORSA report. The Company's largest exposures are monitored quarterly, ensuring that QEL's exposure remains within its approved risk appetite.

Emerging risks

Emerging risks are risks that have not yet been fully understood or classified. The Risk Management function, with input from the wider management team, identifies and prioritises emerging risks for assessment. Emerging Risks are documented and reviewed by the RCC, and also reported to the Board.

Risk reporting

The Risk Management function provides quarterly written reports to the RCC and the Board that cover the following core risk information:

- Exposures against risk appetite and tolerances;
- Results of quarterly self-assessment on risk register control activities;
- Material operational risk events (and near misses); and
- Any proposed changes to the risk management framework.

The Risk Management function also ensures that the results from the SCR calculations are reported to the RCC and the Board.

Capital assessment

QEL's SCR is calculated using the Solvency II standard formula on a quarterly basis. The Board is responsible for ensuring that the Company continuously holds sufficient eligible own funds to cover the SCR and MCR.

QEL has a target to maintain eligible capital above the SCR as defined in the Risk Appetite Statements of maintaining an internally targeted 140% – 160% solvency coverage ratio.

Material changes to the risk profile over the course of the year could trigger ad-hoc recalculation of the SCR and potentially an update of the ORSA.

A Capital Management plan is in place which provides formal guidance on how QEL maintains the required regulatory and economic capital to support its business plan over a three-year period.

Stress testing and scenario testing

Stress testing and scenario testing include consideration of single stresses and multi-faceted scenarios across all material risk categories to assess QEL's ability to meet the capital requirements under stressed conditions.

B.3.4 Own Risk and Solvency Assessment

Own Risk and Solvency Assessment is defined as the entirety of the processes and procedures employed to identify, assess, monitor, manage, and report the current and long term risks an insurance undertaking faces or may face and to determine the own funds necessary to ensure that the undertaking's overall solvency needs are met at all times.

ORSA process

The risk management framework is implemented and integrated through the various committees, processes and procedures described in section B.1, B.1.1 and B.3.3. These processes contribute towards QEL's solvency self-assessment, which seeks to identify and measure all material risks to which the Company is exposed, informing the decision-making process. QEL's ORSA covers all material risk, including the quantifiable risks which are within the scope of the SCR, the material risks outside the scope of the SCR and the emerging risks.

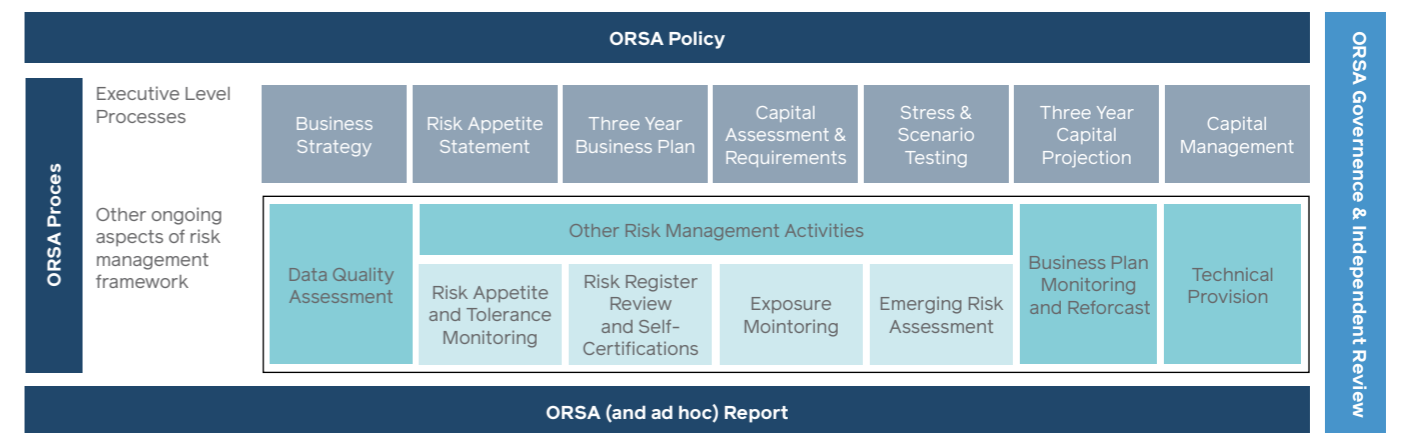

The purpose of the ORSA report is to:

- Inform the Board annually of the capital requirements in line with the business plan and strategy;
- Summarise the current and future/emerging material risks (quantifiable and non-quantifiable);
- Present the current regulatory Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR) and own view of capital;
- Project the future capital requirements, including a comparison with the expected own funds over the planning horizon;
- Summarise the capital management plan; and
- Present the results of the stress and scenario testing, as well as reverse stress testing.

The ORSA report is addressed to QEL's Board. It will also be submitted to MFSA as part of the Company's annual filing requirements.

The processes which comprise the ORSA operate throughout the year, and the ORSA report summarises the outcome of these processes for the Board on an annual basis.

The ORSA processes are summarised in the following figure

The responsibilities and frequency of the ORSA processes/reports are documented in the ORSA Policy.

The ORSA report is prepared by the Risk Management function with contributions from the relevant business functions throughout the Company.

Should there be significant changes to the business strategy or the risk profile, an ad-hoc ORSA update will be produced and submitted to the Board and shared with the MFSA. The trigger events for such ad-hoc ORSA are documented in the ORSA Policy.

ORSA Risk Coverage

The ORSA includes all identified risks that QEL is exposed to as a result of its activities.

Solvency II regulation requires QEL to quantify the SCR relating to the following risks:

- Insurance Risk – Underwriting Risk (including Catastrophe Risk)
- Insurance Risk – Reserving Risk
- Market Risk (including foreign exchange risk)
- Credit risk
- Operational Risk

The Standard Formula SCR computation excludes the risk categories listed below and they are assessed and managed as part of the wider Risk Management System and qualitatively assessed as part of the ORSA:

- Group Risk
- Strategic Risk
- Reputational Risk (including Conduct Risk)
- Liquidity Risk
- Regulatory Risk
- Emerging Risk

Use of the ORSA report

The ORSA report summarises the outcome from the ORSA processes for the Board and management on an annual basis. The ORSA report is used by the Board to assess the solvency capital needed to execute the business plan.

The ORSA outputs are also used for:

- Business planning process and strategy. The ORSA Report notifies the Board of any strategic changes, emerging risks and the stressed conditions that may impact on the business plan.
- Risk appetite and tolerance setting, including using the ORSA results to explore strategies for mitigating risks that exceed the risk appetite.
- Risk Management Framework improvements, including Risk Register updates, risk policy updates and internal control improvements.
- The results from the capital projections are used for capital planning, including alternatives to ensure the continued solvency is maintained under normal and adverse conditions.
- Reinsurance and investment strategies may be changed as a result of the ORSA.
- The ORSA supports senior management in defining future management actions to transfer or accept the risk position taken by the QEL. These potential risks and the related courses of action inform the stress tests, reverse stress tests and emerging risks of the ORSA process.

B.3.5 Stress and Scenario tests

QEL's risk management process includes a range of stress and scenario tests, analysing and reporting on the outputs as part of the ORSA processes. The stress and scenario testing is used to identify possible events and future changes in economic conditions that could have unfavourable effects on the business plan and financial standing.

The stress and scenario testing approach, process, governance and reporting requirements are described in the QEL Risk and ORSA policies that are approved by the Board.

Reverse stress tests

Reverse stress tests identify individual and combined scenarios that would place significant stress upon the business and threaten the financial viability of the

Company. These scenarios are considered as part of the Own Risk and Solvency Assessment process and include those scenarios which could cause a loss of market confidence, which could render the business model unviable, albeit not necessarily to the point where the business runs out of capital. Potential scenarios considered include group risk and investment illiquidity.

As part of this process, potential scenario drivers are identified. The likelihood of their occurrence is assessed, and their materiality defined, management actions are then identified that could prevent and/or mitigate the scenarios.

Business model failure due to adverse outcomes of the reverse stress tests over the planning horizon is considered to be unlikely.

B.4 Internal Control System

QEL has established a sound and effective corporate governance framework that is appropriate to the size, nature, complexity and risk profile of the Company and that allows for the sound and prudent management of its activities.

The internal control framework seeks to mitigate risks and limit the probability of losses (or other adverse outcomes) as well as providing a framework for the overall management and oversight of the business.

QEL's internal control framework is based on the following elements:

- A Three Lines of Defence model that ensures appropriate segregation of risk ownership (as documented in section B.1 and B.3).
- Adequate and transparent organisational structure with clear allocation and segregation of responsibilities, ensuring decisions are made and information is transmitted appropriately at the right levels.
- Corporate policies defining key principles and rules for operation; operating procedures detailing the activities and controls individuals are expected to perform. The policies and procedures are documented for all significant operations across the Company and are reviewed at least once a year.
- Specific focus on outsourcing procedures and controls.

- Appropriate management information framework that allows for the monitoring of key areas (i.e. achievement of strategic objectives, business performance, investment performance and liquidity, concentration exposures, reserving adequacy, capital requirements, material risks faced by the business, risk appetite and tolerance, effectiveness of the control environment, material outsourced functions, compliance with laws and regulations).
- Promoting a risk responsible culture and training staff to ensure that they understand their responsibilities relating to internal controls, ensuring that their actions are in compliance with QEL's policies, procedures and relevant laws and regulations.

The key controls mitigating material risks are documented in the risk register and assessed as part of the quarterly risk and control assessment process.

Internal and external auditors play a key role in the oversight and assessment of the overall control environment. Findings from audit reviews are shared with and discussed by the Audit Committee, and also feed into the risk and solvency assessment processes.

B.5 Internal Audit Function

The Internal Audit function is segregated from all operational functions and provides independent assurance on the effectiveness of the risk management, internal controls and governance frameworks.

Internal Audit has unrestricted access to all areas of the organisation so as to effectively conduct internal audit reviews. The Internal Audit function was outsourced to PricewaterhouseCoopers AG, Switzerland (PwC) during 2023 and will be succeeded by BDO LLP in 2024.

The main responsibilities of the function are to:

- Provide independent assurance on the effectiveness of the risk management, internal control and governance frameworks.
- Conduct internal audit reviews, discuss the findings and agree action points with the relevant business areas, prior to reporting to the Audit Committee.
- Develop a rolling three-year Internal Audit Plan and provide the Audit Committee with quarterly

updates against the plan.

- Review and evaluate the annual coverholder audit schedule and the completed coverholder audit reports.

Further assurance is being obtained through the use of a panel of coverholder auditors who examine in detail the controls and transactions of all coverholder partners. This is a management control under the oversight of the Delegated Authority Manager and all audit reports are also provided to the Internal Audit function to assist it in its work.

In each audit location, Internal Audit fulfils its responsibilities in compliance with local legal and regulatory requirements (such as the MFSA Insurance Code of Conduct), and in accordance with the International Standards for the Professional Practice of Internal Auditing issued by the Institute of Internal Auditors ("IIA") as well as further guidelines of the IIA.

B.6 Actuarial Function

QEL's Actuarial function support was provided via outsourcing agreements with an external consultant and through an intra-group Outsourcing Agreement with Antares Global Management Limited company (AGML), enabling segregation of duties within the actuarial team. The services provided to QEL, as they relate to actuarial work are overseen by the key Actuarial function Holder.

The Actuarial function's responsibilities are as follows:

- Ongoing development of reserving systems for QEL; performing quarterly reserve reviews and preparing the necessary reserving reports for QEL's financial statements and external reporting including regulatory filings.
- Oversight of the calculation of the technical provisions which are calculated externally
- Communication of reserve calculations to management within QEL.
- Preparing financial projections for the purposes of assessing potential future SCRs and QEL's ability to meet these.
- Ongoing review of QEL's recording of contract data that is used for the preparation of financial statements with the goal of improving accuracy.

- Supporting the Risk Management function in the calculation of the SCR.
- Providing support to ensure the achievement and maintenance of Solvency II compliance.
- Providing actuarial opinion on the UW policy and reinsurance strategy.
- Close communication with pricing function to discuss the ongoing monitoring of performance of key MGAs.
- Preparation of risk appetite statements to ensure any risks and uncertainties are well communicated.

AGML provides the following actuarial and modelling services to QEL:

- Advising QEL underwriters on technical price, profitability, product design, portfolio impact, data quality, applicability of modelling, uncertainties and third-party reliance.
- Assisting with business planning, researching new classes and territories of business, assisting with portfolio optimisation and improving return on capital.

B.7 Outsourcing

B.7.1 Outsourcing Policy

Antares Global's outsourcing policy applies to all internal and external outsourcing arrangements and describes how all outsourcing agreements are arranged, overseen, monitored and managed.

Outsourcing is used to complement QEL's overall business strategy, objectives and risk appetite. Arrangements are only considered and entered into where they offer improved business performance, both operationally and financially. QEL does not seek to enter into any outsourcing arrangements that will result in reduced standards or an increased level of risk exposure that breaches the risk appetite.

QEL understands that, in accordance with regulatory requirements, where it outsources any of its activities either to external third-party service providers or intra-group entities, it will continue to be responsible and held accountable for the performance and output of those activities.

Each outsourcing arrangement is subject to robust processes:

- The business function owner is responsible for demonstrating the rationale for selecting and shortlisting the potential provider.

- Each service provider is subject to due diligence.
- A formal approval process is in place (including review of contracts by legal experts).
- The MFSA is notified of any new outsourcing arrangements or changes to existing outsourcing arrangements.
- Service provider assessments are performed.
- Validation may be sought through an independent audit.

The business function owners are responsible for identifying and assessing the risks associated with an outsourcing arrangement and ensuring that the service providers have adequate internal control systems in place.

The Company's outsourcing policy requires QEL to notify the competent authority of its intention to outsource any critical or important outsourcing functions and activities sixty (60) days prior to the outsourcing of critical or important functions.

In line with the new paragraph 6.8.4 of Chapter 6 of the Insurance Rules, the MFSA will be required to review the information submitted by the authorised undertaking and within sixty (60) days.

The table below outlines the outsourced functions that are considered critical or important:

Function / Work performed as at 31/12/2023	Jurisdiction of the Function	Name of Provider
Insurance Management	Malta	Marsh Management Services Malta Limited
Internal Audit		
(Critical Function)	Zurich	BDO previously PwC
Company Secretarial	Malta	Valletta Legal
Compliance		
(Critical Function)	Malta	Marsh Management Services Malta Limited
Compliance		
(Critical Function)	London	Antares Global Management Limited
Payroll	Malta	RSM Malta
Investment Advisors	Doha	Epicure Investment Management LLC
Finance	London / Malta	Antares Global Management Limited
HR Support	Zurich	Antares Global Management Limited
IT Services	London	Antares Global Management Limited
Reinsurance services	Bermuda/London	Antares Global Management Limited
Risk Management	Bermuda/London	Antares Global Management Limited
Actuarial	Bermuda/London	Antares Global Management Limited

The Board maintains oversight and control of all outsourced functions.

B.7.2 Delegated Underwriting and Claims Management

QEL focuses on coverholder or coinsurance partners across the UK and Europe. QEL's business model was designed to provide access to niche and traditional insurance business either by line of business, or geography, or both, for both existing portfolios and entrepreneurial start-up ventures. The coverholder or an appointed third-party administrator is responsible for claims management with QEL's Claims team providing oversight of performance in accordance with service level agreements.

An appropriate governance structure is in place and is administered by the CEO, Delegated Underwriting Authority ("DUA") Manager and the Board to provide robust oversight and clear accountability of delegated underwriting and claims management arrangements. QEL has a robust process for selecting and managing coverholders and third-party administrators.

Pre-bind due diligence includes business rationale in respect of new or renewal delegated authority and provides detail of market assessment, rates, loss ratio and alignment with the QEL strategy.

Each arrangement is governed by a delegated authority agreement (whether for delegation of underwriting or claims) and provide detailed guidance, limits, scope, terms and conditions. Delegated arrangements are reviewed by the compliance team.

Post bind the arrangements are monitored through regular coverholder performance monitoring including monitoring actual premium income against estimated premium, exposures, compliance with limits and the conditions of the agreement, service standards and business written in classes and territories as specified in the agreement. This is augmented by audits, typically carried out by specialist auditors.

QEL maintains an approved panel of coverholder auditors and uses a market standard for the scope of audit work, with a specific focus on certain areas depending on the nature of the transaction and the performance of the coverholder. A log is maintained for tracking the completion of audit recommendations.

B.8 Any other Material Information

There is no other material information regarding the system of governance.

RISK PROFILE

The view of material risks at QEL is a combination of the top risks from the Risk Register (based on their residual rating) and the SCR risk ranking (based on the capital impact).

The most material risk categories based on their capital impact are outlined below. The counterparty default risk and non-life underwriting risk continue to be the key drivers of the SCR.

The ranking by risk category based on standard formula SCR is set out below.

QEL – SCR impact assessment USD'000	2023 YE	% of undiv SCR	Rank	2022 YE	% of undiv SCR	Rank
Credit Risk	21,198	59%	1	23,465	59%	1
Underwriting Risk Non-Life	9,587	26%	2	11,889	30%	3
Market Risk	5,415	15%	3	4,283	11%	2
Underwriting Risk Health	7	0%	4	6	0%	4
Underwriting Risk Life	-	0%	-	-	0%	-
Undiversified SCR	36,207			39,642		
Diversification	(6,928)			(7,007)		
Basic SCR	29,279			32,635		
Operational Risk Charge	8,784	30% of BSCR		9,791	30% of BSCR	
Adjustment for Deferred Tax	-			-		
Solvency Capital Requirement (SCR)	38,063			42,426		

*All numbers relate to the assessed Year End position

The total SCR has fallen by around \$4.4m compared to last year. However, the percentage risk ranking by risk category has remained relatively stable. Credit risk is the largest risk given the small QEL retention overall, see Section D.2 for a comparison of gross and net technical provisions. The counterparty default risk also drives the relatively large operational risk charge.

The key risk drivers, the rationale for the ranking of each type of risk, and the approach to managing the risks are documented in this chapter.

C.1 Underwriting Risk

C.1.1 Insurance Risk Management

Insurance risk includes underwriting and reserve risk.

QEL manages the insurance risk through:

- Selection and implementation of the underwriting strategy and guidelines;
- Adequate reinsurance arrangements;
- Exposure management;
- Adequate reserves and claims management processes.

Underwriting risk is defined as the risk that the frequency and/or severity of insured events exceeds the expectations of QEL at the time of underwriting.

QEL manages underwriting risk through the use of defined limits, pricing models, peer review processes and oversight from the Underwriting Management Committee and the Board. QEL's underwriters ensure that:

- Inward business written, or authority delegated to cover holders is matched by suitable reinsurance;
- The net retained position of QEL remains within the risk appetite; and
- QEL has appropriate licenses and regulatory approval for any business written.

The pricing adequacy of the underlying business is assessed as part of the evaluation of cover holder business propositions at inception and renewal through the use of various pricing models and analyses, rating tools and related monitoring reports. QEL benefits from underwriting advice and assistance from affiliated companies.

Reserve risk is defined as the risk of loss due to the previously established reserves for claims reported on previously exposed business turning out to be incorrect in terms of quantum or timing.

Reserve risk arises from the inherent uncertainty (fluctuations in the timing and amount of claim settlements) surrounding the adequacy of the reserves or technical provisions set aside to cover insurance liabilities. QEL's reserve risk profile is primarily short-tail, where claims are reported and settled quickly. However, some classes include an element of long-tail run-off (notably UK motor that includes third-party liability) and they expose QEL to reserve variations in the longer term.

Robust controls are in place to ensure that reserving processes are adequate and that reserving data is complete and appropriate.

Reserve risk exposure is managed within the Actuarial function and through defined reserving practices, which are overseen by the Reserving Committee and the Board.

C.1.2 Insurance Risk Measurement and Exposure

QEL targets a multi-class balanced portfolio. The portfolio is composed of principally low severity/high frequency business. The risk of an accumulation relating to a natural catastrophe is low relative to the size of the portfolio and excess of loss reinsurance protection is in place.

The Company's largest exposure to natural catastrophe risk is driven by the risk of a windstorm in the UK, albeit this has reduced compared to previous years. This risk is continually monitored within the exposure management framework, ensuring that QEL's exposure remains within its approved risk appetite.

The majority of QEL's insurance risk exposure is short-tailed with claims reported and settled quickly. The Company's highest exposure to reserve risk comes from longer-tail lines of business, notably motor liability, which is more exposed to reserve variations in the longer term. The long-tail portion of the UK motor portfolio contributes to around 10% of incurred losses within this line of business each year.

Solvency Capital Requirement

The SCR using the standard formula provides an appropriate method for QEL to quantify its exposure to insurance risk, given its risk profile, size and complexity. Material changes to the underwriting risk profile would trigger a recalculation of the SCR and a reassessment of the suitability of the standard formula for quantifying the risks to which the Company is exposed.

The diversified SCR for insurance risk at the end of the reporting period and at the end of last year is composed as follows:

QEL – SCR impact assessment USD'000	2023 YE	2022 YE	Difference
Underwriting Risk Non-Life	9,587	11,889	(2,302)
Diversification within UW Risk NL	(733)	(2,766)	2,033
Premium and Reserve Risk	9,318	10,264	(946)
Lapse Risk	89	447	(358)
CAT Risk	912	3,944	(3,032)

*All numbers relate to the assessed Year End position

The SCR for non-life underwriting risk has fallen by around \$2.3m compared to last year.

The changes in sub-risks are explained as follows:

- Premium and Reserve risk has fallen by \$946k due to:
 - Premium volumes falling as a result of a reduction in premium. There is a reduction in past and future premiums following non-renewal of material business contracts during 2022 and into 2023.
- Catastrophe exposure has run-off during 2023, significantly reducing this risk.
- Lapse risk: The reduction in lapse risk is a function of the reduction in premium volumes.

C.1.3 Insurance Risk Sensitivity analysis

During the annual ORSA process, a range of sensitivity and scenario testing against material risks is performed. During the 2024 ORSA process six scenarios around insurance risk were run, the outcomes were articulated as an impact to the SCR ratio.

Under all scenarios the SCR ratio remained above 100%. Two of the scenarios reduced the SCR ratio to below the effective minimum requirement of 125%. These were an increase in both gross and net technical provisions by 20% and a Covid-19 combination scenario.

C.2 Market Risk

C.2.1. Market Risk Management

Market risk is defined as the risk of loss, or of adverse change in the financial situation, resulting directly or indirectly from fluctuations in the volatility of market prices of assets, liabilities and financial instruments. It is the risk that the value of basic own funds changes unfavourably, due to economic factors such as variations in interest rates.

Investment Strategy

The QEL Investment Strategy is to return an acceptable yield, whilst safeguarding the principal and meeting liquidity requirements. QEL has identified three key objectives for the investment of assets, consistent with its Risk Appetite. QEL recognises that the objectives can, at times, be conflicting, and therefore prioritises the achievement of each objective in the order listed below. These objectives are set out below:

Objective 1 – Preservation of capital

QEL recognises that losses can arise from the movement in market price of financial assets. QEL has some appetite for loss from this risk, however this is not significant. Accordingly, the investment portfolio should be comprised of well diversified, predominantly high quality (investment grade) assets with a duration not exceeding that of its liabilities.

The desire for capital preservation is the main objective of the investment strategy and should take priority over the other objectives. Importantly, this does not mean that capital preservation must be achieved to the exclusion of the other objectives, but rather, that when taking investment decisions, capital preservation is priority.

Objective 2 – Appropriate return relative to risk

The second objective is to ensure, that the return achieved from the financial assets is appropriate for the risk taken. To achieve this objective, QEL may set benchmark returns for the portfolio of financial assets that it holds and monitors performance against that benchmark. QEL recognises that actual performance may deviate from benchmark for any individual monitoring period. However, it does not expect the actual performance to be consistently worse or better than the benchmark as this implies that return is not appropriate for the risk. Achievement of appropriate return is subordinate to preservation of capital.

Objective 3 – Liquidity requirements met

The third objective is to ensure that QEL has financial assets of sufficient liquidity to meet its cash-flow requirements, for the reasonably foreseeable future.

This objective does not mean simply, that assets must be readily realisable, but rather that assets should be capable of being liquidated swiftly and without significant loss of value.

Achievement of the liquidity objective beyond the minimum requirement is subordinate to the preservation of capital and appropriate return.

Portfolio Execution

Epicure Investment Management LLC, the wholly owned investment advisory services subsidiary of QIC Group, is appointed as Investment Advisors for QEL. Epicure provides a range of investment advisory and investment management services to the Company under an Investment Management Agreement. Epicure is responsible for managing day-to-day portfolio activities under their management and providing a quarterly investment report to the investment committee. Investment Mandates are approved by the Investment Committee and the Board and include details of permitted investments (including limits), minimum credit ratings, maximum concentrations and duration limits (with due regard to liability duration).

Investment of assets in accordance with the Prudent Person Principle

The investment strategy is heavily weighted towards fixed income and cash deposits and ensures that the Company only invests in instruments that any reasonable individual aiming for capital preservation and return on investment would own, in the best interests of its policyholders. Investment mandates include details of permitted investments (including limits), minimum credit ratings and maximum concentrations. The guidelines only allow the assumption of investment risks that can be properly identified, measured, responded to, monitored, controlled, and reported. The guidelines are set to ensure appropriate and adequate capital, liquidity and ability to meet policyholder obligations. QEL's investment guidelines are approved by the Board which provides oversight of QEL's investment policy, strategy and performance.

Political, economic and social environment

QEL continuously monitors the wider external risk environment, which includes emerging risks identified through the emerging risk process.

C.2.2 Market Risk Measurement and Exposure

Market risk is measured against the Company's risk appetite and tolerance statements, which define the investment allocation limits by investment type, geographical region, credit rating etc.

The investment portfolio is comprised of cash, bonds and highly liquid money market funds (classified as collective investment undertakings) at the end of the reporting period.

The Fixed Income portfolio has an average rating of BBB+.

In addition, QEL's exposure is further split amongst different sectors, with the greatest reliance being around investments in the financial sector. The remainder of the portfolio is spread across Government, Industrial & Basic Materials, Diversified, Utilities, Communications & Technology & Consumer Disc & Staples.

The highest contributor to market risk is currency risk. Foreign exchange risk arises due to mismatches in the currencies of the assets held to match liabilities. The Company monitors this risk on an ongoing basis, QEL invests predominantly in USD-denominated investments to optimise the returns achieved. Given that liabilities are mostly GBP and EUR denominated, QEL is exposed to a weakening of the USD. However, the main reinsurance contracts (which are with Antares Re and the QIC Group) are USD denominated, but written so as to follow the fortunes of the ceded portion of risk so there is no mismatch between the foreign exchange rate at which the gross claim is paid and the rate at which the ceded portion is recovered.

Spread risk relates to the risks that arise from changes in the level or in the volatility of credit spreads over the risk-free interest rate term structure. This is driven by QEL's fixed income portfolio.

Concentration risk can arise when the investment portfolio is not appropriately diversified across counterparties, geographical regions and industries. Concentration risk is measured with reference to the Company's risk appetite and tolerance statements, which limit the concentration of asset holdings.

Liquidity risk arises when the Company is unable to meet its payment obligations as and when they fall due. Liquidity risk management is discussed in section C.4.

Solvency Capital Requirement

The diversified SCR for market risk as follows:

QEL – SCR impact assessment USD'000	2023 YE	2022 YE	Difference
Market Risk	5,416	4,282	1,134
Diversification within Market Risk	(2,279)	(2,979)	700
Spread Risk	1,677	2,855	(1,178)
Interest Rate Risk	223	1,423	(1,200)
Currency Risk	4,536	1,697	2,839
Concentration Risk	1,259	1,286	(27)

*All numbers relate to the assessed Year End position

The increase in market risk is due to:

- The increase in currency risk offset by decreases in spread and interest rate risk.

C.2.3 Market Risk Sensitivity analysis

During the annual ORSA process, a range of sensitivity and scenario testing against material risks is performed. During the 2024 ORSA process five scenarios were run, the outcomes were articulated as an impact to the SCR ratio. These scenarios included inflationary stresses, spread widening as a result of ratings downgrades and interest rate movements.

Whilst all five scenarios resulted in a reduction in the SCR ratio, it remained above 140%. The SCR ratio was most sensitive to a combined scenario of a yield curve shift and widening spreads.

C.3 Credit Risk

C.3.1 Credit Risk Management

Credit Risk is defined as the risk of loss due to counterparty default or failure to fulfil their obligations. It arises from both underwriting and investment activities.

Failure of a reinsurer to settle claims in full, failure of a cover holder or a bank are the most material credit risks for QEL.

The Board is ultimately responsible for ensuring that credit risk exposures are appropriately managed and monitored. The Finance Director is responsible for the identification and management of credit risk with the support of the finance function, business functions and the Investment Managers.

The key mitigating controls for credit risk include:

- Approval procedures for accepting new counterparties;
- Monitoring of the security rating of all banking and reinsurance counterparties;
- Aged debt monitoring and reporting;
- Investment Guidelines that include details of permitted securities, minimum credit ratings and maximum concentrations;
- Monitoring of the concentrations of credit risk arising from similar geographic regions and activities
- Assessing the financial stability of the coverholders and third-party administrators during the due-diligence process and before renewal.

Consistent with a Group-wide capital management strategy and the group restructuring involving Antares Re, QEL takes advantage of risk mitigation techniques contemplated in Article 189 paragraph 2(d) of Commission Delegated Regulation (EU) 2015/35. This allows for the reclassification of certain counterparty exposures where certain tests criteria, set out in Articles 209–215 of the Delegated Regulation can be satisfied. Antares Re has provided a facility to the Company that meets the requirements and thus causes a reduction in the required capital of the Company.

C.3.2 Credit Risk Measurement and Exposure

Credit risk is measured through monitoring exposure in accordance with the risk appetite and tolerance statements.

Credit risk is the largest contributor to QEL's capital requirement. At the end of the reporting period, the Company's largest exposure to credit risk came from the large proportion of risk ceded to reinsurance counterparties. The majority of the exposure is intra-Group due to the large proportion of business ceded to Antares Re (and historical business which was ceded to QIC). Both Antares Re and QIC are rated A- by S&P Global Ratings and A- by A.M. Best. This exposure is classified as type 1 in the SCR standard formula. There is no exposure against reinsurers with a rating below A- unless via a collateral, or similar, arrangement.

In addition, QEL is exposed to premium counterparty default risk as it transacts with a number of coverholders. Exposure to coverholders is captured and actively monitored by the Finance function. Exposures to receivables from intermediaries and policyholder debtors are classified as type 2 exposures in the SCR standard formula. There are no balances overdue by more than three months.

The security rating of all banking and custodian counterparties is considered an appropriate metric for measuring credit risk arising as a result of QEL's need to hold cash at bank. These ratings are monitored on a daily basis. Deposits with banks and custodians are classified as type 1 exposures in the SCR standard formula.

Solvency Capital Requirement

Credit risk is the largest contributor to the Company's capital requirements (59% of the undiversified SCR). It is mostly generated by Type 1 exposure due to its extensive reinsurance programme. This can be seen in the gross vs net TP numbers as shown in Section D.2.

The breakdown of the fixed income portfolio by rating is as follows:

QEL – SCR impact assessment USD'000	2023 YE	2022 YE	Difference
Credit Risk	21,198	23,464	(2,266)
Diversification within Credit Risk	(575)	(389)	(186)
Type 1	19,198	22,196	(2,998)
Type 2	2,575	1,657	918

*All numbers relate to the assessed Year End position

The reduction in Credit risk is explained by:

- A decrease in type 1 counterparty default risk due to a reduction in reinsurance recoverables due to the reduction in Cat risk exposure.
- An increase in type 2 counterparty default risk. The increase is in type 2 exposures with less than 3 months overdue debt.

C.3.3 Credit Risk Sensitivity analysis

Three credit risk scenarios were run during the annual ORSA process, resulting in moderate decreases in the SCR ratio. The scenarios including bond default, failure of the largest premium debtor, default of the largest external reinsurer and default of largest creditor. In all instances the SCR ratio remained above 140%. The greatest impact to the SCR ratio was due to the bond default scenario where default of the top 3 counterparties by corporate bond exposure takes place.

C.4 Liquidity Risk

C.4.1 Liquidity Risk Management

Liquidity risk is the risk of loss or inability to realise investments and other assets in order to settle financial obligations when they fall due.

QEL ensures that sufficient liquidity is maintained to meet both immediate and foreseeable cash-flow requirements.

The Board has ultimate responsibility for the management of liquidity risk and it has delegated oversight and ownership of liquidity management to the Key Function Holder for Finance. Day-to-day management of liquidity is the responsibility of the Finance function. Both short-term and long-term liquidity risks are considered, with actions taken to ensure QEL has a long-term view of its liquidity requirements, arising from liabilities based on an actuarial assessment of risk, and to ensure access to liquid funds to meet these liabilities.

The approach to Liquidity Risk Management is set out in the Investment & Liquidity Policy. Liquidity risk limits are defined in the risk appetite and in the Investment Guidelines.

Liquidity risk monitoring is largely undertaken through internally built models and there are currently no plans to acquire any sophisticated liquidity management tools and/or software, as current processes are deemed to be sufficient for

providing the required level of risk mitigation.

Other liquidity monitoring controls include:

- Cash balance monitoring through production of daily fund positions showing funds across all bank accounts of the Company.
- Cashflow forecasting & projections on a short-term basis to manage immediate liquidity requirements and on a long term basis as part of the business planning process.
- Regular liquidity reporting to the Risk & Capital/ Investment Committees of key liquidity risk metrics such as asset/liability duration mismatch, short to medium term liquidity positions, extreme event liquidity etc.

C.4.2 Liquidity Risk Measurement and Exposure

The company continues monitoring its liquidity via a range of metrics including through a series of risk appetites. Based upon the liquid nature of QEL's investment portfolio there is no significant concern from a liquidity risk perspective.

C.5 Operational Risk

C.5.1 Operational Risk Management

Operational risk is defined as the risk of loss arising from inadequate or failed internal processes, people, systems or from external events impacting the organisation's ability to operate. This risk encompasses all functions rendered in the course of conducting business. This includes legal and regulatory risk, but excludes risks arising from strategic and reputational risk.

The heads of functions at QEL have responsibility for the oversight of operational risks in their respective areas.

Operational risk is managed through a broad range of controls including:

- A strong internal control culture
- Effective corporate governance, including segregation of duties, avoidance of conflicts of interest, clear lines of management responsibility, adequate management information reporting.
- Staff training/awareness of the control responsibilities relating to their roles.
- IT systems, Business Continuity and Disaster Recovery plans.
- Compliance with laws and regulations.
- Recruiting/retaining adequately skilled staff, adequate performance assessment system.
- Procedures to minimise internal/external fraud.
- Ensuring accurate and timely financial (and other external) reporting.
- Assessment of the impact of outsourcing material functions on operational risks and procedures for due diligence, monitoring and reporting of outsourced service providers.
- Operational loss monitoring process.

C.4.3 Expected Profit Included in Future Premiums

The amount of expected profit included in future premiums (EPIFP) was calculated in accordance with Article 260 of the Solvency II Delegated Acts.

The EPIFP net of reinsurance (QEL's profits are driven by net results) is USD \$0.1m at the end of the 2023 reporting period. This is a reduction from USD \$0.2m reported in 2022. Gross of reinsurance, the 2023 EPIFP is \$1.3m compared to a 2022 EPIFP of \$2.8m

QEL monitors operational risk exposures through its Risk Register and the operational loss monitoring (risk event reporting) process, which are overseen by the Risk and Compliance Committee.

C.5.2 Operational Risk Measurement and Exposure

Solvency Capital Requirement

The operational risk capital charge calculations within the SCR standard formula are based on the volume of business, and do not take into account the quality of the operational risk management system or the internal control framework. The calculation considers the Company's gross earned premiums and gross technical provisions. The premium-based operational risk charge, calculated based on earned gross premiums, exceeds the maximum capped capital charge set at 30% of the basic SCR, meaning that the charge is determined as 30% of the basic SCR.

The SCR for operational risk as follows:

QEL – SCR impact assessment			
USD'000	2023 YE	2022 YE	Difference
Operational Risk	8,784	9,790	(1,006)

*All numbers relate to the assessed Year End position

The operational risk capital requirement has fallen in line with the movement in total SCR.

C.5.3 Operational Risk Sensitivity analysis

During the annual ORSA process, a combined significant operational event scenario was run. The outcome was articulated as an impact to SCR ratio, potential for regulatory action, as well as impact to market confidence.

C.6 Other material risks

C.6.1 Strategic and reputational risk

Strategic risk is defined as a function of the incompatibility between two or more of the following components: the strategic goals, the business strategies, the resources deployed to achieve these goals, the quality of implementation and the economic situation of the markets in which the insurer operates.

QEL recognises reputational risk as a by-product of inappropriate/inadequate management and mitigation of all other risk categories. As such, the identification of the reputational risk is the combined responsibility of all Risk Owners. The internal controls framework, effective compliance and risk management functions, monitoring of operations by the Board and the committees and the due diligence/audit procedures for coverholders contribute to minimising reputational risk.

Strategic and reputational risks are monitored through the risk appetite, risk management oversight and stress/reverse stress testing process. Other specific mitigants of strategic risk include:

- Effective business planning and performance monitoring.
- Aligning the business strategy, risk appetite, business plan, underwriting guidelines and capital requirements.
- Periodic review of the emerging risks and assessment of the potential impact on the business.
- Capital management planning.

QEL ensures that Board members are fit and proper to discharge their responsibilities, which includes providing the necessary strategic direction.

C.6.2 Group risk

Group risk arises as a result of being part of an insurance group, including exposures resulting from intra-group transactions.

QEL has ceded a large proportion of risk to Antares Re and historically to QIC, which are both rated A- by S&P Global Ratings and A-/Excellent by A.M. Best.

There is also some operational dependency as a result of some key functions being outsourced within the Group (see section B.7 for further details).

C.6.3 Emerging Risks

An ongoing emerging risks process is in place, with material risks identified, monitored, and where applicable managed.

C.6.4 Exposure arising from Off-balance Sheet Positions

QEL does not have any risk exposure arising from Off-Balance sheet positions.

C.6.5 Material Risk Concentrations

The Company's risk appetite and tolerance statements, approved by the Board, govern the concentration limits in relation to counterparties, credit quality and geographical locations to avoid material risk concentration.

There are also a number of managerial level limits used across different functions to manage risk exposures within the approved risk appetites. For example, investments are managed within the scope of the approved investment mandate. Market risk concentrations are discussed in section C.2.2.

QEL's most material credit risk concentrations relate to reinsurance recoverables and receivables from coverholders. The approach to managing this risk is documented in section C.3. A large proportion of business is ceded to Antares Re (and historical business which was ceded to QIC). Both Antares Re and QIC are rated A- by S&P Global Ratings and A- by A.M. Best.

C.6.6 Risk Mitigation Techniques

The internal control framework seeks to mitigate risks, protect policyholders and limit the likelihood of losses or other adverse outcomes, as well as to provide a framework for the overall management and oversight of the business. QEL's internal control framework is summarised in section B.4. Key controls are captured within the Risk Register and assessed as part of the risk and control assessment process described in section B.4.

The Company purchases both quota share and excess of loss treaty reinsurance by line of business and/or individual MGA to reduce volatility and concentration of exposure to insurance losses.

The effectiveness of the reinsurance programme is monitored to ensure it meets the defined objectives.

As noted in section C.3, QEL took advantage of the risk mitigation techniques contemplated in Article 189 of the Delegated Acts.

C.7 Any other Material Information

Economic conditions and inflation: QEL is impacted by the wider economic environment including changes to inflation and/or interest rates.

Sustained above average inflation rates have continued to be observed throughout 2023 across the UK and EU, which mostly impact the underwriting, claims, investment and expense activities of QEL.

Covid-19: The majority of covered COVID claims have been settled by QEL and for those that remain open, QEL continues to work with its policyholders to resolve all COVID-related claims. Post the 2021 Supreme Court judgement in the FCA test case, there remain certain unresolved coverage and quantification issues that QEL is addressing. QEL is working to have any disputes that affect its policyholders resolved in the appropriate fora. QEL's COVID reserves are set on a best estimate reserving methodology. The legal evolution on continuing cases is routinely monitored by QEL and a framework is in place to review our reserves in response to legal developments.

D VALUATION FOR SOLVENCY PURPOSES

The assessment of available and required regulatory capital is made by taking an economic view of the Company's assets and liabilities, in accordance with the Solvency II valuation principles. The Solvency II balance sheet is produced on an economic basis and is presented in Appendix 1.

D.1 Assets

The following table sets out the assets held on QEL's audited balance sheet, prepared under IFRS following the adoption of IFRS 17, as at 31 December 2023:

	31/12/2023 USD'000	31/12/2022 USD'000 Restated
Assets		
Cash and cash equivalents	19,148	12,345
Other receivables	33,868	43,859
Income tax receivable	228	-
Deferred tax asset	550	887
Financial investments	24,209	41,139
Insurance contract assets	19,408	-
Reinsurance contract assets	422,415	424,695
Property, plant and equipment	38	103
Total Assets	519,864	523,028

The solvency reporting continues to be based on the MFSA returns templates, the content of which has not been changed in light of IFRS 17 implementation and, therefore, the related financial information for solvency reporting continues to be based on the previous accounting basis (i.e. IFRS 4).

The table below shows the walk of unwinding the IFRS 17 measurement adjustments on our assets to the previous accounting basis.

Balance sheet USD'000	IFRS 17 BS - 31/12/2023	Reverse IFRS 17 Measurement Impacts For FY23	Reverse IFRS 17 Measurement Impacts Up To 31/12/2022	Reclassification To IFRS 4 Measurement	QEL Previous Accounting Basis BS - 31/12/2023
Assets					
Cash and cash equivalents	19,148	-	-	-	19,148
Insurance and other receivables	33,868	-	-	187,633	221,501
Income Tax Receivables	228	-	-	-	228
Deferred Tax Assets	550	-	-	-	550
Financial investments	24,209	-	-	-	24,209
Insurance contract assets	19,408	(6,406)	10,635	97,944	543,996
Reinsurance contract assets	422,415				
Property and equipment	38			-	38
Total Assets	519,864	(6,406)	10,635	285,577	809,670

The main drivers contributing to above adjustments are as follows:

- Unwinding of IFRS 17 measurement impacts up to 31 December 2023 in respect of discounting, risk adjustment, RI non-performance, additional DAC and ECL.
- To clarify, under IFRS 17, Insurance contract liabilities are calculated by discounting expected future cash flows using yield curves internally derived reflecting a fair value and market-consistent interest rates that two willing parties would accept in a liability transfer transaction. The starting point for constructing these yield curves are risk-free rates for each major currency. These are subsequently adjusted with illiquidity premiums and credit risks for instance to derive fair value rates.
- Further, under IFRS 17, the risk adjustment for non-financial risk is the compensation that the Company requires for bearing the uncertainty about the amount and timing of the cash flows of groups of insurance contracts. The risk adjustment reflects a margin that an insurer is

willing to load its reserves with to reduce the uncertainty that future cash flows will exceed the expected value amount.

This is slightly different to the approach followed for calculating risk margin under Solvency II whereby we calculate the risk margin using simplification method 1 as set out within Article 58 of the SII Delegated Regulation 2015/35, which is proportional to the nature, scale and complexity of QEL's business.

- The other key element highlighted in above table is the reclassification of insurance receivables and payables from Insurance and Reinsurance Contract Assets to the presentation applicable under the previous accounting basis (IFRS 4).

The following table sets out a comparison of assets resulting from unwinding of IFRS 17 measurement principles to the Financial Statements under IFRS and the previous accounting basis (IFRS4), with assets on Solvency II balance sheet. The difference column compares Financial Statement figures with Solvency II valuations:

Class of Assets	2023	2023	2022	2023	2022	
USD'000	IFRS	Prior Accounting Basis (unaudited)	Prior Accounting Basis (audited)	Solvency II Basis	Solvency II Basis	Difference: IFRS vs Solvency II
Deferred Acquisition Costs (DAC)	-	9,208	18,591	-	-	-
Income and Deferred Taxes	778	887	887	4,545	4,120	3,767
Property Plant & Equipment (own use)	38	38	103	38	103	-
Bonds	22,688	22,688	36,247	22,688	36,247	-
Collective Investment Undertakings	1,521	1,521	4,892	1,521	4,892	-
Reinsurance Recoverables	-	543,996	620,129	492,242	477,933	492,242
Deposits to cedants	33,858	147,254	186,205	53,000	35,103	19,142
Insurance Receivables	-	57,010	56,330	13,376	56,330	13,376
Reinsurance Receivables	-	7,889	15,559	7,889	15,559	7,889
Receivables (trade, not insurance)	10	31	11	31	11	21
Cash & Cash equivalents	19,148	19,148	12,345	19,148	12,345	-
Reinsurance Contract Assets	422,415	-	-	-	-	(422,415)
Insurance Contract Assets	19,408	-	-	-	-	(19,408)
Total Assets	519,864	809,670	951,299	614,478	642,643	94,614

D.1.1 Valuation bases, methods and main assumptions

There were no changes to the recognition and valuation bases for assets in 2023 in respect of assets not impacted by the transition to IFRS 17.

Cash and cash equivalents, fixed income securities and all other assets on the Solvency II balance sheet are recorded at fair value in line with IFRS or the previous accounting basis, with changes in fair value of available-for-sale investments being included in the statement of other comprehensive income, with the total comprehensive income (or loss) increasing (or decreasing) the own funds.

The Company's bond portfolio is invested in high quality and liquid securities. These bond securities are publicly listed and traded over the counter ("OTC") in active markets rather than on an exchange (like equities). The Fair value of the securities is based on the observable price within the market. We consider a market to be active in the context of market liquidity, considering factors such as trading volumes, bid-ask spreads, and market quotes (under normal market conditions)."

The Company does not use any alternative methods for valuation of investments, in accordance with Article 263 of the Solvency II Delegated Regulation.

In cases where the IFRS or the previous accounting basis principles do not require fair value, investments are valued using the Solvency II valuation hierarchy, as defined in the Solvency II Delegated Regulation. Receivable balances which are due in more than one year are discounted using the risk-free discount curve.

Differences between the bases, methods and assumptions used for the valuation for solvency purposes (Solvency II balance sheet) and the previous accounting basis are outlined below:

- Deferred acquisition costs (DAC) are valued at nil in the Solvency II balance sheet as the company does not expect future cashflows to arise from this asset. DAC is not a feature under IFRS following the adoption of IFRS 17.
- Cash and cash equivalents, fixed income securities, bonds and all other assets – are recorded at fair value on the Solvency II balance sheet in line with IFRS. There is no change to this following the adoption of IFRS 17.
- Reinsurance Recoverables – this is the reinsurers share of the best estimate, less counterparty default and is calculated in line with the Solvency II requirements. Under IFRS 17, this is measured as assets for remaining coverage within Reinsurance Contract Assets.
- Insurance Receivables – Under Solvency II the future premiums expected but not yet due are not recognised as assets and are instead reclassified as a liability. Under IFRS, this is measured as liabilities for remaining coverage.
- Reinsurance Receivables – pertains to balances due from reinsurers which is consistent under Solvency II and the previous accounting basis. Under IFRS, this is now treated as Assets for Remaining Coverage under Reinsurance Contract Assets.
- Deposits to Cedants is lower on a SII basis as some of QEL's binders are written on a Funds Withheld basis. On the Solvency II basis, these Funds Withheld are considered paid and therefore do not constitute as an asset on the SII balance sheet. Under IFRS, these are part of Insurance Contract Liabilities.
- Under Solvency II, DTA represents the valuation differences between the previous accounting basis and solvency II principles. This amount is completely excluded from Eligible Own Funds used for calculation of SII Capital requirements.

D.2 Technical Provisions

The main liabilities on the Solvency II balance sheet are the technical provisions, gross of reinsurance recoverables, which consist of liabilities for claims outstanding and premium provisions.

As at 31 December 2023, QEL held technical provisions (TP) for non-life business and for health business

(health exposure is very limited due to ancillary coverages on some of the core business lines) as defined within Solvency II.

The following table sets out the net technical provisions as at 31st December 2023 compared to 31st December 2022 on a Solvency II basis.

Line of business	As at 31/12/2023				As at 31/12/2022			
	Gross Best Estimate Liability	Net Best Estimate Liability	Risk margin	Net Technical provisions	Gross Best Estimate Liability	Net Best Estimate Liability	Risk margin	Net Technical provisions
	USD'000	USD'000	USD'000	USD'000	USD'000	USD'000	USD'000	USD'000
Workers' Compensation	400	20	2	22	336	17	-	17
Motor Vehicle Liability	179,303	496	1,180	1,676	189,462	12,786	-	12,786
Other Motor	51,842	248	327	575	55,047	4,766	-	4,766
Marine, Aviation & Transport	6,176	(210)	32	(178)	7,263	154	-	154
Fire & Other Damage to Property	194,361	34,767	1,227	35,994	165,997	14,003	-	14,003
General Liability	98,345	8,254	691	8,945	96,030	8,122	-	8,122
Miscellaneous Financial Loss	2,516	411	45	456	471	(20)	-	(20)
Credit & Suretyship	3,393	106	22	128	3,252	99	-	99
Total	536,336	44,092	3,526	47,618	517,858	39,927	-	39,927
% change 2023 vs 2022				19%				

Overall, the technical provisions increased to a value that is 19% greater than their estimated value in 2022.

D.2.1 Valuation Methods, Basis and Assumptions

Solvency II requires insurers to place an economic value on their assets and liabilities for solvency purposes. More specifically, the value of the technical provisions should be the amount that the insurer would be required to pay in order to transfer its obligations relating to its insurance contracts to a willing third party in an arm's-length transaction.

Insurance liabilities are difficult to value due to uncertainty of both the amounts and timing of future payments. Therefore, alongside the net present value of the expected future cashflows relating to claims liabilities, a risk margin is required to cover the cost of capital that the receiving party is subject to, having taken on the obligations. The risk margin can be thought of as the mechanism that moves the valuation of the insurance liabilities to a mark-to-market basis.

The best estimate liability aims to represent the probability-weighted average of future cash flows required to settle the insurance obligations attributable to the lifetime of QEL's policies. The best estimate cash flows include future best estimate premium payments, claim payments, expenses expected to be incurred in servicing the Company's policies over their lifetime, investment costs and any payments to and from reinsurers. The best estimate liability is discounted using the currency-specific risk-free yield curves as published by the European Insurance and Occupational Pensions Authority (EIOPA).

The method and assumptions used within the estimation of the technical provisions are equivalent to those used within the estimation as at the previous reporting period.

In determining the technical provisions on a Solvency II basis, QEL's starting point is the technical provisions under the previous accounting basis.

The reserves under the previous accounting basis are estimated using the following reserving classes:

- Agriculture, including pets, livestock and bloodstock;
- Aviation & Space;
- Credit & Surety;
- Property: contracts covering single risks;
- Energy: contracts covering single risks;
- Property: binding authority business;
- Engineering: contracts covering single risks;
- Liability professional lines & General Liability;
- Marine;
- Motor: non-UK business; and
- Motor: UK business.

Under IFRS 17, these classes are aggregated under Property & Casualty or Marine & Aviation.

The reserving classes segment divide the business into homogeneous groupings based on the underlying risks. The groupings set out above have been used for estimating QEL's reserves consistently since QEL's inception.

The reserves on an IFRS basis are split between earned reserves, relating to periods of past exposure, and the unearned premium reserve, relating to periods of future exposure on already incepted policies.

The main differences between the value of the technical provisions for solvency purposes and the previous accounting basis valuation are as follows:

- Expected losses on the unearned business are taken into account in the calculation of premium provisions, removing any portion of the unearned premium reserve (UPR) that is in excess of this amount (i.e. allowing for the expected profits or losses in case of unprofitable business).
- The premium provisions and claims provisions include an amount relating to all future expenses to run off the insurance liabilities and for events not in the data set.
- Elimination of Deferred acquisition cost (DAC) is applied.

In addition to the key differences above, the Solvency II valuation of Fire & Other Damage to Property Line of business considers the use of Funds Withheld, which significantly reduce the size of the technical provisions.

Furthermore, the Solvency II valuation of Motor Vehicle Liability, Other Motor, Fire & Other Damage to Property and General Liability line of business considers Variable Commission payments that are not taken into account in the IFRS basis, which also reduces the technical provisions.

The Company did not make use of any of the following:

- Matching adjustment referred to in Article 77b of the Solvency II Directive;
- Volatility adjustment referred to in Article 77d of the Solvency II Directive;
- Transitional risk-free interest term structure referred to in Article 308c of the Solvency II Directive;
- Transitional deduction referred to in Article 308d of the Solvency II Directive.

The best estimate of the amounts recoverable from reinsurance contracts and other risk transfer mechanisms is calculated separately from the gross best estimate. The calculation is based on principles consistent with those underlying the gross best estimate, projecting all cash flows associated with the recoverables and discounting using the risk-free rate yield curve.

Further, under the previous accounting basis, technical provisions are split into an earned portion, relating to periods of risk exposure that have already expired, and an unearned portion, relating to periods of risk exposure that are yet to expire.

On the Solvency II basis, this distinction is also made, however profit within the yet-to-expire period of risk is recognised immediately within the premium provisions. Similarly, any loss relating to the cession of assumed business due to the reinsurer's profit margin etc. is recognised immediately. An adjustment is made to reflect the expected losses on reinsurance recoverables due to counterparty default. The adjustment is based on an assessment of the probability of default of the counterparty and the average loss resulting from the default.

D.2.2 Risk Margin

The risk margin is added to the best estimate to reflect the uncertainty associated with the probability-weighted cash flows. It is calculated using a cost of capital approach, which calculates the cost of providing eligible own funds for the duration of the run-off of the obligations to cover the insurance risk, counterparty credit risk and operational risk components of the SCR. The rate used in the determination of the cost of providing the own funds is called cost-of-capital rate. A cost-of-capital rate of 6% is applied to the capital to cover the full period needed to run off the insurance liabilities. The cost of capital in each future year is discounted using the risk-free discount curve.

Given the size and complexity of QEL's business model, the complexity of the analysis to project QEL's balance sheet over the lifetime of its insurance obligations in order to forecast the associated Solvency Capital Requirement at each future period would be disproportionate to the modest impact. QEL therefore calculates the risk margin using simplification method 1 as set out within Article 58 of the SII Delegated Regulation 2015/35, which is proportional to the nature, scale and complexity of QEL's business.

Under simplification method 1, QEL approximates the individual risks or sub-risks within some or all modules to be used for the calculation of future SCRs. This method considers a 'risk driver' approach to approximate the run-off of each risk at each time point in the future.

D.2.3 Uncertainty

There are several material assumptions, involved in the calculation of technical provisions under the previous accounting basis which are also relevant in the context of the Solvency II Technical Provisions. The actuarial valuation of loss reserves incorporates a degree of uncertainty, emerging from the fact that the actual payment dates of the future cash flows as well as the actual eventual loss settlement amount are unknown. Additionally expected recoveries may not be realised as counterparties might default.

SII Technical Provisions

The uncertainties outlined above would also affect the SII technical provisions. There are also additional inherent uncertainties in the Solvency II valuation basis. It should however be noted that:

- The Methodologies and assumptions used in the Technical Provision valuation are appropriate for the specific classes of business of QEL and the way the business is managed, having regard to the available data.
- The calculations are performed in line with guidance issued by EIOPA

Lastly, in addition to the internal reserving quality assurance process, the reserve estimates are based on expert judgement, benchmarks and other available relevant market data. They are also subject to an external independent review as well as a full review from an Audit firm. These reviews provide an extra layer of assurance that the best estimate reserves are within a reasonable range.

D.2.4 Material differences between Solvency II and financial statement basis

The changes in bases, method and assumptions used in the valuation of technical provisions under Solvency II and the financial statements are set out in the table below:

	Total (USD m)
IFRS net Insurance Contract Liabilities	7.7
Reversal of IFRS 17 Measurement Adjustments	7.5
Reclassification to previous accounting basis	31.6
Previous Accounting Basis net TPs (net of DAC – unaudited)	46.8
Future premium incepted	(0.2)
Future premium un-incepted	1.8
Net future claim cost	(2.4)
Additional expenses	-
ENIDs	0.1
Reinsurance bad debt adjustment	0.2
Discounting	(2.3)
Risk Margin	3.5
Solvency II net technical provisions	47.5

In determining the technical provisions on a Solvency II basis, QEL starting point is the technical provisions under the previous accounting basis.

The reserves under the previous accounting basis are split between earned reserves, relating to periods of past exposure, and the unearned premium reserve, relating to periods of future exposure on already incepted policies.

The main differences between the value of the technical provisions for solvency purposes and the previous accounting basis valuation are as follows:

- The premium provisions and claims provisions include an amount relating to all future expenses to run off the insurance liabilities and for events not in the data set.
- Elimination of Deferred acquisition cost (DAC) is applied.

The best estimate of the amounts recoverable from reinsurance contracts and other risk transfer mechanisms is calculated separately from the gross best estimate. The calculation is based on principles consistent with those underlying the gross best estimate, projecting all cash flows associated with the recoverables and discounting using the risk-free rate yield curve.

Further, under the previous accounting basis, technical provisions are split into an earned portion, relating to periods of risk exposure that have already expired, and an unearned portion, relating to periods of risk exposure that are yet to expire.

On the Solvency II basis, this distinction is also made, however profit within the yet-to-expire period of risk is recognised immediately within the premium provisions.

Similarly, any loss relating to the cession of assumed business due to the reinsurer's profit margin etc. is recognised immediately. An adjustment is made to reflect the expected losses on reinsurance recoverables due to counterparty default. The adjustment is based on an assessment of the probability of default of the counterparty and the average loss resulting from the default.

D.2.5 Reinsurance Recoverables

The following table shows the reinsurance recoverables as at 31 December 2023, valued under Solvency II, split by line of business.

Reinsurers' share of technical provisions by line of business is as follows:

Non-Life Reinsurance Recoverables By Line of Business on a Solvency II (Best Estimate) Basis	2023 YE	2022 YE USD'000	Change USD'000
Medical Expense	-	-	-
Workers' Compensation	380	319	60
Motor Vehicle Liability	178,807	176,677	2,130
Other Motor	51,593	50,281	1,312
Marine, Aviation & Transport (MAT)	6,385	7,110	(725)
Fire & Other Damage to Property	159,594	151,994	7,600
General Liability	90,091	87,908	2,183
Legal Expenses	-	-	-
Miscellaneous Financial Loss	3,286	3,154	132
Credit & Suretyship	2,106	490	1,615
Total Reinsurance Recoverable (Non-life)	492,242	477,933	14,308

The estimation of the reinsurance recoverable is analogous to that of the gross technical provisions with the exception that the estimate of the reinsurers' share of technical provisions is adjusted to allow for the potential default of a reinsurer.

To estimate an appropriate adjustment for the potential default of a reinsurer, the best estimate of the reinsurance recoverable is multiplied by the counterparty recovery rate (which is set at 50%), multiplied by the modified duration of the receivables and again multiplied by the probability of default over a one-year time horizon which is set depending on their rating (e.g. 0.05% for an A rated reinsurer).

D.3 Other Liabilities

The following table sets out the liabilities held on QEL's audited balance sheet, under IFRS, as at 31 December 2023:

Liabilities	31/12/2023 USD'000	31/12/2022 USD'000 (Restated)
Other payables	2,315	3,065
Income tax payable	-	947
Deferred tax liability	300	-
Due to related parties	3,920	10,600
Insurance contract liabilities	419,588	441,633
Reinsurance contract liabilities	29,987	-
Total Liabilities	456,110	456,245

The table below shows the walk of unwinding the IFRS 17 measurement adjustments on our liabilities to that under the previous accounting basis:

Balance sheet USD'000	IFRS 17 BS - 31/12/2023	Reverse IFRS 17 Measurement Impacts For FY23	Reverse IFRS 17 Measurement Impacts Up To 31/12/2022	Reclassification To IFRS 4 Measurement	QEL Previous Accounting Basis BS - 31/12/2023
LIABILITIES					
Insurance contract liabilities IFRS 4	-	-	-	590,807	590,807
Provisions, Reinsurance and other payables (A)	2,315	-	-	155,657	157,972
Insurance contract liabilities IFRS 17	419,588	(7,313)	18,325	(460,587)	-
Reinsurance contract liabilities IFRS 17	29,987	-	-	-	-
Deferred Tax Liability (A)	300	-	-	(300)	-
Income tax payable	-	-	-	-	-
Subsidiary/Branch Office Control (A)	3,920	-	-	-	3,920
Total Liabilities	456,110	(7,313)	18,325	285,577	752,699
Total Other Liabilities (A)	6,535	-	-	155,357	161,892

The main drivers contributing to above adjustments are outlined in detail under Section D.1 Assets in this report. No other adjustments have been made to liabilities section in respect of the transition from IFRS 17 to the previous accounting basis.

The liabilities, excluding technical provisions and marked with (A) in the table above, as at 31 December 2023 are set out below, alongside their value as at 31 December 2022 on each of the IFRS, the previous accounting basis and Solvency II bases.

Other Liabilities	Ref	31/12/2023	31/12/2023	31/12/2023	31/12/2022	31/12/2022
USD'000		IFRS	Previous Accounting Basis (Unaudited)	Solvency II	Previous Accounting Basis (audited)	Solvency II
Deferred Commission Income	1	-	8,564	-	17,292	-
Reinsurance Payables	2	-	147,618	19,350	141,972	6,941
Payables (trade, not insurance)	3	5,915	5,090	5,090	2,385	2,385
Insurance and Intermediaries Payables	4	620	620	0	58,668	58,668
Total	A	6,535	161,892	24,440	220,318	67,994

Valuation bases, methods and main assumptions are:

1. Deferred commission income is valued at nil within the Solvency II balance sheet as the Company does not expect future cashflows from this liability. This is consistent with IFRS 17.
2. Reinsurance payables due within three months are not discounted. This is analogous to the treatment of insurance receivables within the balance sheet assets. Differences are driven by Funds Withheld and Variable Commissions. Under IFRS 17, these are recognised as assets for remaining coverage.
3. Payables (trade, not insurance) relate to trade accruals and are valued at face value. This comprises other payables excluding IPT, Deferred Tax Liability and Intercompany Payables.
4. Insurance and intermediary payables relate to amounts owed to intermediaries and for IPT and are valued at face value. This is recorded under "Other Payables" in the IFRS Balance Sheet.

D.4 Alternative Methods of Valuation

No alternative methods of valuation have been used during the reporting period.

D.5 Any other Material Information

There is no other material information regarding the valuation of assets and liabilities for solvency purposes.

E CAPITAL MANAGEMENT

The Company is required by the MFSA to hold available own funds of an amount that is equal to or exceeds the MCR and SCR, in accordance with the Solvency II Directive. The SCR is calculated using the Solvency II standard formula.

QEL benefits from its parent company's credit rating due to the backing provided by QIC in the form of a parental guarantee and the quota share treaties with Antares Re and QIC.

E.1 Own Funds

E.1.1 Management of Own Funds

Capital adequacy is maintained with reference to QEL's risk appetite. At any given time, the Company aims to maintain a strong capital base to enable QEL to support the business plan based on its own view of the capital required, and meeting regulatory capital requirements on an ongoing basis.

The ORSA process enables QEL to identify, assess, monitor, manage and report on the current and emerging risks that it faces, and to determine the capital necessary to ensure that overall solvency needs are met at all times.

The Capital Management Action Plan identifies the various thresholds below which available capital may be depleted, and the actions QEL will adopt to maintain capital adequacy. QEL can manage its capital position by either increasing the amount of available capital or by taking action to reduce the required capital. The approach taken is dependent on the specific circumstances of the event giving rise to the depletion of available capital.

QEL projects a business plan for three years, which includes both projected income statement and balance sheets. These projected business plan profit and loss accounts and balance sheets form the basis of the SCR projection. Own funds have been projected (for three years) based on the business plans prepared under the previous accounting basis and claims development and payment patterns provided by the Reserving and Financial Planning and Analytics teams, allowing for an adjustment to translate this to a Solvency II Economic Balance Sheet.

There have been no material changes to the management of own funds during the reporting period.

E.1.2 Tiers of Own Funds

Solvency II legislation has introduced a three-tiered capital system designed to assess the quality of insurers' capital resources eligible to satisfy their regulatory capital requirement levels. The tiered capital system (Tiers 1, 2 and 3) classifies capital instruments into a given tier based on their loss absorbency characteristics. The highest quality capital is eligible for Tier 1, which is able to absorb losses under all circumstances, including as a going concern, during run-off, wind-up or insolvency. Tier 2, while providing full protection to policyholders in a wind-up or insolvency scenario, has moderate loss absorbency on a going-concern basis. Tier 3 meets, on a limited basis, some of the characteristics exhibited in Tiers 1 and 2.

Eligibility limits are applied to each tier in determining the amounts eligible to cover regulatory capital requirement levels.

The Governance of QEL's Tier 1 assets are described in Section C.2.1 and follow the QEL Investment Strategy. The investment strategy is heavily weighted towards fixed income and cash deposits and ensures that the Company only invests in instruments that any reasonable individual aiming for capital preservation and return on investment would own.

The following table shows the available and eligible capital to cover the SCR as at the end of 2023:

QEL – Eligible Capital to cover SCR USD'000	2023 YE	2022 YE	Difference
Tier 1 – Available Capital	45,632	48,318	(2,686)
Tier 2 – Available Capital	23,000	23,000	-
Tier 3 – Available Capital	4,545	4,120	425
Available Capital	73,177	75,438	(2,261)
Tier 1 – Eligible Capital	45,632	48,318	(2,686)
Tier 2 – Eligible Capital	19,031	21,213	(2,182)
Tier 3 – Eligible Capital	-	-	-
Eligible Capital for SCR	64,663	69,531	(4,868)
Ineligible Capital for SCR	8,515	5,907	2,608
Solvency Capital Requirement (SCR)	38,063	42,425	(4,362)
SCR ratio	170%	164%	6%

*All numbers relate to the assessed Year End position.

The following table shows the eligible capital to cover the MCR:

QEL – Eligible Capital to cover MCR USD'000	2023 YE	2022 YE	Difference
Tier 1 – Available Capital	45,632	48,318	(2,686)
Tier 2 – Available Capital	-	-	-
Tier 3 – Available Capital	-	-	-
Available Capital	45,632	48,318	(2,686)
Tier 1 – Eligible Capital	45,632	48,318	(2,686)
Tier 2 – Eligible Capital	-	-	-
Tier 3 – Eligible Capital	-	-	-
Eligible Capital for MCR	45,632	48,318	(2,686)
Ineligible Capital for MCR	-	-	-
Minimum Capital Requirement (MCR)	9,516	10,606	(1,090)
SCR ratio	480%	456%	24%

*All numbers relate to the assessed Year End position.

The Tier 2 Letter of Credit is not eligible to cover the MCR as it is not a basic own funds item (SII Delegated Regulation 2015/35, Article 98.4). There are no planned redemptions, repayment or maturity dates linked to the share capital.

No additional solvency ratios to the ones included in template S.23.01 (i.e. SCR and MCR) are disclosed by the Company.

The changes in own funds over the reporting period are presented in the table below. Please note: rounding differences of +/- one unit can occur in the table.

Own Funds USD'000	31/12/2023 Tier 1 Unrestricted	31/12/2022 Tier 1 Unrestricted	31/12/2023 Tier 2	31/12/2022 Tier 2	31/12/2023 Tier 3	31/12/2022 Tier 3
Ordinary Share Capital	22,500	22,500	-	-	-	-
Share premium account relating to ordinary share capital	-	-	-	-	-	-
General reserve	-	-	-	-	-	-
Reconciliation Reserve	(16,326)	(13,640)	-	-	-	-
Letter of credit	-	-	23,000	23,000	-	-
Other own fund items approved by the supervisory authority as basic own funds not specified above	39,458	39,458	-	-	-	-
Deferred Tax Assets	-	-	-	-	4,545	4,120
Total Own Funds	45,632	48,318	23,000	23,000	4,545	4,120

E.1.3 Differences in Shareholder's Equity as Stated in the Financial Statements vs. the Available Capital and Surplus for Solvency Purposes

The table below shows the comparison of QEL's basic own funds under Solvency II and shareholders' equity under IFRS as of 31 December 2023:

Detail USD'000	Reference	IFRS	Solvency II Base	Variance: IFRS vs Solvency II
Ordinary Share Capital		22,500	22,500	-
Insurance Finance Reserve		558	-	(558)
Profit and Loss Account	a	1,238	-	(1,238)
Reconciliation Reserve	a	-	16,326	(16,326)
Deferred Tax Asset		-	4,545	4,545
Capital Contribution		39,458	39,458	-
Total Basic Own Funds		63,754	50,177	(13,577)
Letter of Credit			23,000	23,000

The key differences between the total equity shown under IFRS and Solvency II are as follows:

- a) Under Solvency II, a reconciliation reserve is recognised. This reserve is the amount of the adjustments made to the assets and liabilities to arrive at the Solvency II estimates by applying Solvency II valuation principles. This reserve reduces the company's Total Basic Own Funds by USD \$16.3m.

Reconciliation reserve has fallen from a -\$13.6m to -\$16.3m (\$2.7m reduction).

The volatility of the reconciliation reserve is subject to change throughout the year as a result of changes in economic earnings and capital measures (dividends, capital increases, etc.). Fluctuations in the reconciliation reserve are addressed via QEL's asset-liability management processes.

A net deferred tax asset (DTA) of USD \$4.5m has arisen due to the difference between the previous accounting basis balance sheet and the Solvency II balance sheet. This amount is completely excluded from Eligible Own Funds used for calculation of SII Capital requirements.

E.1.4 Own Funds subject to Transitional Arrangements

At the end of the reporting period, QEL does not hold any own funds which are subject to transitional arrangements.

E.1.5 Ancillary Own Funds

At the end of the reporting period, QEL holds USD 23m of Tier 2 capital which has been provided in the form of Letter of credit (LoC) guaranteed by parent (Antares Reinsurance Company Limited). These are the only ancillary funds that are held by QEL.

There have been no material changes to the process used to determine the level of ancillary own funds.

E.1.6 Factors Affecting the Availability and Transferability of Own Funds

There are no factors affecting the availability and transferability of own funds.

In 2023, the company did not deduct items from the Own Funds.

E.2 Solvency Capital Requirement and Minimum Capital Requirement

E.2.1 Calculation of the SCR

The SCR and MCR have been determined using the standard formula approach set out in the Solvency II Delegated Regulation 2015/35.

For the calculation of Counterparty default risk, QEL uses a simplified calculation of the recoverables from reinsurance contracts, as per Article 107 of the SII Directive. This is proportionate to the nature, scale and complexity of its risks.

QEL does not use undertaking-specific parameters pursuant to Article 104(7) of the Solvency II Delegated Regulation 2015/35.

QEL is not subject to any capital add-on at the end of the reporting period.

The final amount of the SCR is subject to supervisory assessment.

E.2.2 Calculation of the MCR

The MCR is determined by the standard formula as follows:

- The Linear MCR is calculated based on the net best estimate liability and net written premiums by Solvency II lines of business. The Company's Linear MCR equated to USD \$5.2m at 31st December 2023.
- The Combined MCR is based on the Linear MCR and this should fall within a range between 25% and 45% of the SCR, being USD \$9.5m and USD \$17.1m respectively. As the Linear MCR is below the lower limit, the Combined MCR is the lower limit of this range being USD \$9.5m.
- The MCR is then the greater of the Combined MCR and the Absolute floor of the MCR (AMCR). The AMCR is equivalent to EUR 4.0m for (re) insurers authorised for liability business, and for the period ended 31st December 2023, the AMCR equated to \$4.4m. The Company's MCR is therefore \$9.5m.

The following table shows the breakdown of the movements in MCR:

QEL – MCR Calculations USD'000	2023 YE	2022 YE	Difference
Total MCR NL	5,189	4,684	505
Cap 45%	17,128	19,091	(1,963)
Floor 25%	9,516	10,606	(1,090)
AMCR	4,416	4,282	134
MCR	9,516	10,606	(1,090)

The MCR has fallen in 2023 to \$9.5m from \$10.6m in 2022 as a result of the SCR drop.

E.2.3 SCR by risk module

The following table shows the SCR by risk module:

QEL – Capital Requirement USD'000	2023 YE	2022 YE	Difference
Underwriting Risk Non-Life	9,587	11,889	(2,303)
Diversification within UW Risk NL	(733)	(2,766)	2,033
Premium and Reserve Risk	9,318	10,264	(946)
Lapse Risk	89	447	(358)
CAT Risk	912	3,944	(3,032)
Underwriting Risk Life	-	-	-
Underwriting Risk Health	7	6	1
Market Risk	5,415	4,283	1,132
Diversification within Market Risk	(2,279)	(2,979)	700
Spread Risk	1,677	2,855	(1,178)
Interest Rate Risk	223	1,423	(1,200)
Currency Risk	4,536	1,697	2,839
Concentration Risk	1,259	1,286	(27)
Credit Risk	21,198	23,464	(2,266)
Diversification within Credit Risk	(575)	(389)	(186)
Type 1	19,198	22,196	(2,998)
Type 2	2,575	1,657	918
BSCR post diversification	29,279	32,635	(3,356)
Diversification btw risk types	(6,928)	(7,007)	79
Operational Risk	8,784	9,790	(1,006)
SCR Adjustment	-	-	-
Solvency Capital Requirement (SCR)	38,063	42,425	(4,362)

*All numbers relate to the assessed Year End position

The Company's SCR has fallen by around \$4.4m since last year which is explained primarily by the following:

- Premium and Reserve risk has fallen by \$2.3m due to Premium volumes falling as a result of a reduction in premium. There is a reduction in past and future premiums following non-renewal of material business contracts during 2023.
- Credit risk has fallen by \$2.3m due to a decrease in type 1 counterparty default risk due to a reduction in reinsurance recoverables.
- Market risk has increased by \$1.1m due to an increase in Currency Risk offset by decreases in Spread and Interest Rate Risk.

E.2.4 Solvency Position

The following tables show the SCR and MCR ratio of the Company:

QEL – Eligible Capital to cover SCR USD'000	2023 YE	2022 YE	Difference
Eligible Capital SCR	64,663	69,530	(4,867)
Solvency Capital Requirement (SCR)	38,063	42,425	(4,362)
SCR Ratio	170%	164%	6%

*All numbers relate to the assessed Year End position

QEL – Eligible Capital to cover MCR USD'000	2023 YE	2022 YE	Difference
Eligible Capital MCR	45,632	48,318	(2,686)
Minimum Capital Requirement (MCR)	9,516	10,606	(1,090)
MCR Ratio	480%	456%	24%

*All numbers relate to the assessed Year End position

E.2.5 Other solvency matters

Other required notes:

- The Company does not make use of the duration-based equity risk sub-module of the SCR.
- The Company does not use an internal capital model.
- The Company maintained own funds in excess of the MCR and the SCR throughout the reporting period.

F SUBSEQUENT EVENTS

F.1 Changes in the System of Governance

Any changes to the System of Governance after the reporting period and up to the signing date of this report are outlined in section B.

F.2 Changes in the System of Governance Corporate Structure

There have been no changes to the corporate structure after the reporting period and up to the signing date of this report.
